

Azure OSS Fast Start

Business challenge

Many organizations benefit from Insight's Azure OSS Application Modernization Assessment. Once it's been determined that the best course of action is migrating legacy OSS applications from on-premises or cloud-based VMS to Microsoft® Azure®, it's time to take action and begin realizing the benefits of such a move.

How we help

This Fast Start lets your team partner with Insight to deploy a subset of your OSS application portfolio to Azure. We'll do so by using our library of Infrastructure as Code (IaC) modules, source code scaffolding tools, reference architectures and cloud deployment best practices.

As a result of this Fast Start, you'll accelerate a cloud migration and have up to two OSS applications running in a development environment (Azure App Services or AKS), as well as IaC to replicate the required resources. You'll also have an Azure DevOps project with a functional pipeline to deploy these applications as a result of this Fast Start.

How to prepare

To ensure you receive the greatest value from this Fast Start, you'll need:

- An Azure subscription
- A user with credentials to create related infrastructure
- Access to the source code for the two applications to be migrated

Duration

~6 weeks

Benefits

- **Run your applications** without maintaining underlying infrastructure.
- **Scale your applications dynamically** to meet demand.
- **Gain an understanding** of how your applications will perform in the cloud.
- **Get a playbook** for migrating OSS applications of similar size and architecture.
