

Data Center Transformation

- Holistic turnkey solution
- Fully visibility for the overall IT infrastructure
- Integrate and extend the customer existing IT infrastructure to cloud
- Server / Workload migration from on premise / Cloud to Azure
- Best fit for customer unique IT needs

The customer existing workloads/servers are distributed into low tier data center and two different cloud service providers. It's not easy to manage, maintenance and budgeting with different IT platform.

OneAsia provides a holistic solution to revamp the customer existing IT infrastructure including plan, design, build, migrate and operate. All workloads/servers had been consolidated, standardized and migrated to Azure with minimal business impact. Moreover, Oneasia provides the data protection enhancement service for data loss avoidance. Customer could be easier and faster for budgeting.

- Simplify the management of IT services
- OneAsia provides 7 x 24 Operational Support
- Real-time Utilization Monitoring of workloads
- Data Loss Avoidance
- Spend Control
- Cost Saving through economy of scale and predictable cost

OneAsia Values
