Want a connected safety solution for your people

Velrada's My Safety Hub is the first, fully connected Viva Connections enabled safety solution that provides a central location within your corporate Intranet to keep your remote workforce up to date about jobsite safety matters. The My Safety Hub provides advanced features to inform and protect your staff from environmental, health, Covid and other risks.

Why Velrada?

Velrada is one of Microsoft's most awarded partners with an extensive track record in **delivering practical employee-based experiences** utilising Microsoft's M365 and Viva solutions. Our Viva Connections enabled safety solution will help you protect your staff, whether they work alone, in teams, are on the road or on Site.

This solution is best suited but not limited to businesses operating in the resources sector, logistics and warehousing, as well as, health and Not for Profit businesses. It is designed to help you protect your workers and your company by providing **one place to go for duty of care, compliance and peace of mind**.

It brings people, data and insights together in a single customised dashboard. Our team will work with you to understand your culture, priorities and challenges to help you configure a solution that meets your needs**.**

Get started today with **Velrada's** My Safety Hub

- Support your employees **around the clock** with access to robust safety protocols all powered by Microsoft Viva Connections on any device.
- Enhance **safety compliance** for your employees with immediate access to safety updates, policies and topics all **embedded within your Connections enabled Intranet**
- Provide a quick check-in before the day starts, provide one place to go for G2G passes, vaccination certificates, PPE management, safety updates and fatigue status
- A one stop safety hub for occupational health and safety that provides your people access to key safety processes all in one place

Three steps to help you keep your workforce safe

Step 1. Discover

Identify your critical safety requirements

- Provide a **detailed product overview** and demonstration
- Understand your current technical landscape
- Run a **workshop to identify the critical components** of worker safety in your business:
  - Workday safety plans
  - Policies ,compliance and communication updates
  - Incident reporting
  - PPE order management
  - COVID safe requirements
  - Safety dashboard
  - Scheduled check-ins
  - Emergency response and alerts including location and contact info

Step 2. Implement

Configure My Safety Hub

- Review and assign licenses
- Assist with **solution configuration** and test across PC and mobile devices.
- Set up a **Safety Dashboard** and links to Hub components.
- Set up **governance and audience targeting**, permissions and controls
- **Enable safety dashboard**
- Create a change management plan and **launch awareness campaign** and enablement activities for staff
- Review and manage **pre and post-implementation surveys**

Step 3. Plan for future

Document enhancement opportunities

- **Enhance the My Safety Hub dashboard** to provide greater visibility into key metrics, employee safety and resources.
- **Identify new scenarios**, Look at integration opportunities with LOB applications for a future phase
- **Drive adoption.** Assess change management concerns that inhibit the ability to realise the value of your investment in worker safety and MS Viva
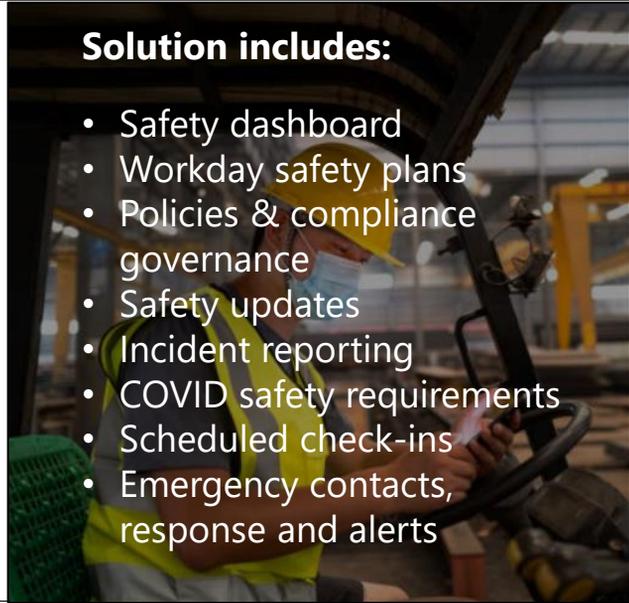

My Safety Hub

Solution at-a-glance

My Safety Hub built on MS Viva Connections
