Aritco moved their Analytics to Azure

Aritco is a manufacturer of platform and residential elevators and the company supplies elevators to both public and private markets worldwide. They had a challenge in managing and gaining control over all data because the structure was outdated and distributed over 130 reports.

Using a modern and flexible solution in Microsoft Azure and Power BI, their processes were streamlined and structured.

AT A GLANCE

Customer: Aritco Group

Website: https://www.aritco.com

Customer Size: 500 miljoner SEK,

Country:: Sweden

Industry: Manufacturing

roducts and Services: Microsoft Azure

Business Vision Consulting, Aritco (part of Latour), & Futuresafe Analytics in Azure

Customer Challenges

Aritco previously had another solution (Qlik View) for managing and analyzing its business data. However, there was a challenge in managing and gaining control over all data because the structure was outdated and distributed over 130 reports.

Aritco had a desire to obtain a more modern and flexible solution with a clearer structure.

Partner Solution

Business Vision's solution became a data warehouse in the Microsoft Azure cloud platform, where data was retrieved from source systems with Data Factory to be processed and customized. After that, Power BI visual reports were created based on data from production, sales, purchasing, and finance.

The reports were developed to make it easy for each unit to obtain valuable insights to facilitate their daily work. The solution allows everyone within the organization to take part of the reports, from top management to those who work in production with the elevators. The reports are distributed smoothly to end users, externally to suppliers and partners via applications, emails or Aritco's own portal.

Customer Benefits

The solution resulted in Aritco being able to liquidate several reports that were not actually used, which allowed the business to work more efficiently as the number of reports decreased from 130 to 37. All data flows were given a clearer structure, from source systems to visual reports. Business Vision also made the solution manageable because Aritco wants to be able to maintain the solution itself.

"At Business Vision, we found a supplier who genuinely wanted to understand our business. "

Johanna Olsson, Technical Project Manager at Aritco

"They were responsive to our needs but also came up with suggestions for improvements. Both the project, the solution, the collaboration and management have worked super well"

Johanna Olsson, Technical Project Manager at Aritco

"Azure Dataplatform is an great place for a Cloud Datawarehouse and serving layer to Power BI."

Michael Bjelvenmark, Project Manager Business Vision
