# DevOps on Azure

## Objective

To support you in DevOps adoption and development of Cloud Native applications in Azure. According to your business objectives and your cloud maturity, we accelerate your rise to competence through training and develop your agility.

- Framing of the need and analysis of the application life cycles
- Performing a Cloud Native Assessment to evaluate the customer's maturity from several angles: infrastructure, Agile application architectures, DevOps, test automation, security
- Inventory of the best practices to be put in place
- Coaching, development and implementation, complemented by training
- Implementation of all or part of the Cloud Native Applications with DevOps as a common thread

## Benefits

Deploy new business-relevant functionality faster

Reduce time to market for new products to stay competitive and reduce disintermediation

Offer a better "quality of service" than your competitors

Move towards a project monitoring culture with indicators for continuous improvement

## Features

- Eligibility and maturity study on Cloud Native Applications
- Level of effort of the Cloud transformation and possible support
- Transformation plan and implementation of the solution
- Elaboration of roadmaps for moving to continuous improvement and integration, CI/CD platforms...
