

# Microsoft Azure Arc Fast Start

Accelerate adoption of Azure® Arc® with cloud enablement experts.

### Business challenge

Today's fast-evolving digital world demands more agility than ever — which means adopting hybrid solutions across multiple clouds, at the edge and in the datacenter. This is no easy task. Expanding your digital footprint across geographical regions, data centers and clouds adds more layers of complexity. And IT teams often find themselves stitching together many different systems to manage disparate governance, workloads and deployments, which can strain resources.

### How we help

Insight's Digital Innovation team will help you adopt Azure Arc to drastically simplify management and operation within your hybrid cloud. Lean on our deep cloud enablement expertise, close relationship with Microsoft and vast resources to invest in Azure Arc quickly and more strategically.

Microsoft® Azure Arc was designed with hybrid solutions at the core to simplify workload management and operational burden across resources, no matter where they live. It gives users single-pane-of-glass visibility and management across virtual and physical machines, Kubernetes clusters and Azure Data Services. Using standard Azure tooling, Insight will demonstrate how Arc users can view metrics and logs, enforce consistent policy, create deployments to Kubernetes, deploy managed SQL Server and PostgreSQL, and much more.

### Preparing for transformation

To ensure you receive the greatest value from this engagement, you will need:

- New or existing Azure subscription(s), accessible by Insight
- Access to subject matter experts and stakeholders

#### Duration

4–8 weeks

#### **Benefits**

- Unify server, Kubernetes and data service visibility and management.
- Simplify debugging and monitoring across hybrid resources.
- Quickly and easily apply policy globally via Azure Policy.
- Standardize RBAC across systems and different types of resources.
- Measure and remediate compliance
   scaled up or down.
