

SaaS Protection for Office 365

Simple, automated and secure backup of your cloud data

SaaS Protection for Office 365 is an all-in-one backup, restore and export solution supporting MS Exchange, OneDrive, SharePoint, and Teams. It ensures that MSPs can access, control, and most importantly protect the data clients entrust to the cloud.

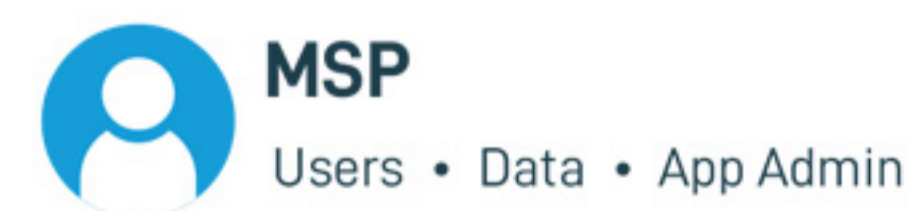

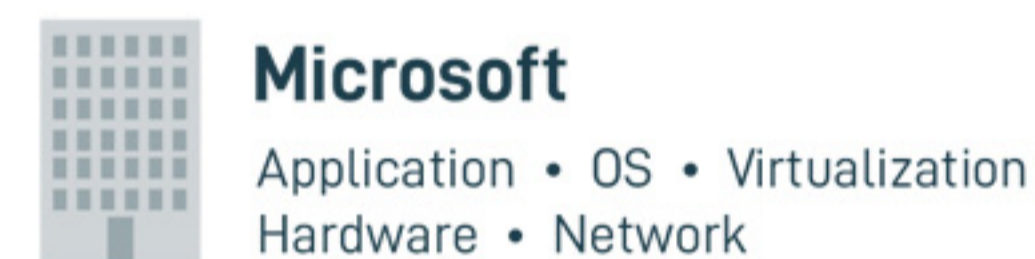

Office 365 Is Not Automatically Protected

Many organizations mistakenly believe that Microsoft Office 365 data is automatically protected. But, that's only partially true. Microsoft does ensure that it won't lose your data, but it does not make any guarantees about restoring data if you do. In other words, Office 365 data is susceptible to:

- Accidental deletion
- Malicious deletion
- Hackers
- Ransomware

Protecting Your End Clients in the Cloud —A Shared Responsibility

SaaS vendors like Microsoft promote a shared responsibility model. They are clear in recommending providers and end-users pursue third-party solutions to ensure they meet business continuity, compliance, and security requirements requiring retention beyond limited native recovery capabilities in Office 365.

The message is simple - Microsoft is responsible for their cloud, end users and their MSPs are responsible for what's in it.

Simple, Automated, And Secure Backup

With Kantanna SaaS Protection, rest assured that you are backing up your clients' cloud data with a reliable, robust solution designed to reduce risk and time you have to spend managing backups.

The advantages are clear:

- Unlimited storage
- Infinite retention
- Easy on-boarding
- Easy restore
- 24/7 support
- Built for MSPs

Client Name	Manage Protection	Product	Protected Seats	Success Rate 24 Hours	Total Storage
