TietoEVRY Cloud Native Application Development & Azure Public Cloud

Many organizations are currently lacking resources for cloud native application development. At the same time cloud native development is becoming de facto standard for new application development.

Software as a Service apps are today preferred apps for many organizations. Unfortunately in many cases available Software as a Service apps do not fulfill all customers' business requirements.

TietoEVRY's custom software development team can provide the needed cloud native full stack software developers you need. Or we can provide the whole team for you. Whether you need an IoT solution or a containerized web application we will deliver it for you.

We create customized SaaS services in Azure cloud for our clients and continue delivering them as a service. You will receive one monthly invoice and we'll provide application and platform maintenance and further development for you.

Starting is often the hardest part. Let TietoEVRY to deliver a quick Proof of Concept for you with Microsoft. Concentrate on creating something new and useful – Azure provides a great set of platform services for that. Quickly validate your Azure software development idea with our team. Clearly scoped Proof of Concept can provide for you valuable insight and basis for decision-making about further development.

Let's work together to grow and enhance your business with Azure public cloud based new solutions!
