

Eastwall’s Data Platform in 30 Days (DPI30)

Eastwall’s DPI30 engagement model collaborates with your team to evaluate business application(s) and process(es) against a data reference architecture, then hand-picks the Azure services that best fit your operating model and desired outcomes. We prototype with you and prove the value in real business outcomes *in just 30 days*.

Partnership Approach

Need less, or maybe even more? Eastwall offers engagements between two and six weeks in duration in which your team receives a hands-on experience designing architectures and implementing your unique data need(s). We work to understand applications & workflows to build mutual expectations around milestones for deployment in your engagement timeframe.

KEY BENEFITS

- Quick deployments of high-value data use cases via rapid **upskilling, execution & hands-on** value.
- Modern toolchain implementation to **ingest, store, and manipulate** data in a secure, well architected framework.
- Connectors to **Azure Synapse Analytics, Azure Machine Learning** and **PowerBI** to generate insights from real-world data.

Design & Model Architecture

Through a collaborative workshop approach, we build consensus on the modern data requirements in your organization with Azure Services. We architect solutions that meet the need.

Provision Data Services

Using a hands-on approach, we help you set operating models for data, then deploy blueprints, templates & components to provision the requirements for a modern data estate.

Future Enabled Roadmap

We choose the appropriate complimentary Azure technologies to enable your long-term integration strategy. We build roadmaps and backlogs that help plot the course, empowering adoption long-term.
