CURRENT SITUATION

Nowadays the IT areas in organizations due to their complexity, it has become a challenge to cover the security of information, due to the large number of applications, systems, databases, devices, servers, etc., all these; they generate their own security events in addition to the security tools they have to protect their environment which also generate security event logs

CHALLENGES

- Monitoring security events of a large number of services, devices, etc.

- Different formats of security logs that must be processed.

- Logs stored in different tools and you do not have a centralized tool.

IDEAL SOLUTION

- Be able to collect and consolidate data in centralized storage.

- Ability to structure data in multiple formats.

- Correlate events to determine potential security issues.

DESIRED RESULTS

- Centralized solution to manage multiple IT controls according to security standards.

- Have a specialist area that reassures the business.

E-Level Cloud Services

Secure IT

Secure IT allows you to focus your efforts on your business with the peace of mind of keeping your IT environment analyzed and ready to quickly identify security issues.

AVAILABILITY

- 100% cloud solution, no need to deploy infrastructure.
- Your data will be in the cloud, you can access it at any time and under compliance with international standards.

PROACTIVITY

- Early threat identification
- Support from cybersecurity specialists.
- Connecting to most solutions that generate events (connectors)

MANAGEMENT

- Alignment with regulatory compliance required by the industry.
- Organize incident events for efficient follow-up and response.
- Event reports, can be based on historical and real time.

E-Level Cloud Services

Secure IT + Azure Sentinel

Secure IT provides our customers with the tools they need to collect, analyze, and respond to security threats, based on event correlation and compliance, using Azure Sentinel and the management and operation expertise provided by E-LEVEL Cloud Services.

PROACTIVITY + Azure Sentinel

Security data is collected in onpremises and cloud, from devices, applications, identity to SaaS-like services. It uses AI to ensure it identifies real threats quickly.

AVAILABILITY + Azure Sentinel

Being a cloud service, it eliminates the need to spend time configuring, maintaining and scaling the infrastructure to address increasing security needs

MANAGEMENT + Azure Sentinel

We help connect the most popular solutions, such as Palo Alto Networks, F5, Symantec, Fortinet, Check Point, Microsoft 365 among others, we advise and we can even deliver managed service or integrate a SOC to your organization.

We shorten the distance between what needs to happen in your IT environment and what's actually happening.
