# Readiness ASSURANCE.

The pace of change in increasing.

The risk of not applying patches is obvious.

But do you know the risk of APPLYING those patches to your application portfolio?

Rest assured. We do.

Readiness.

Security patches and updates for fixing bugs are being released with a regular, and increasing frequency.
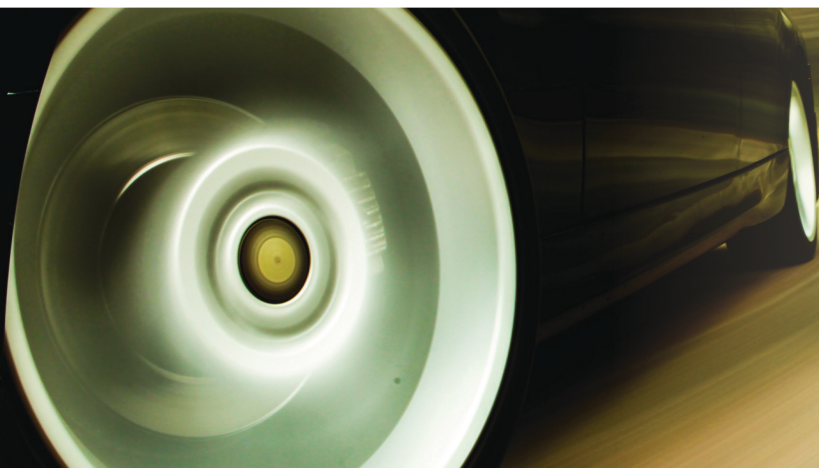

Keeping up with migrations, platform changes and update releases to maintain a secure and stable environment is challenging.
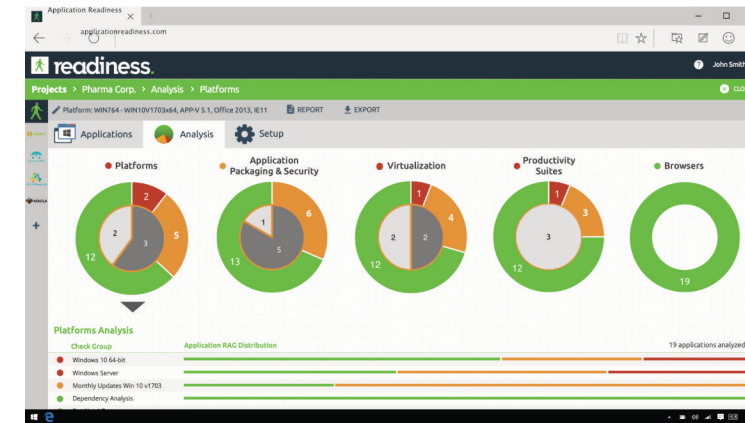

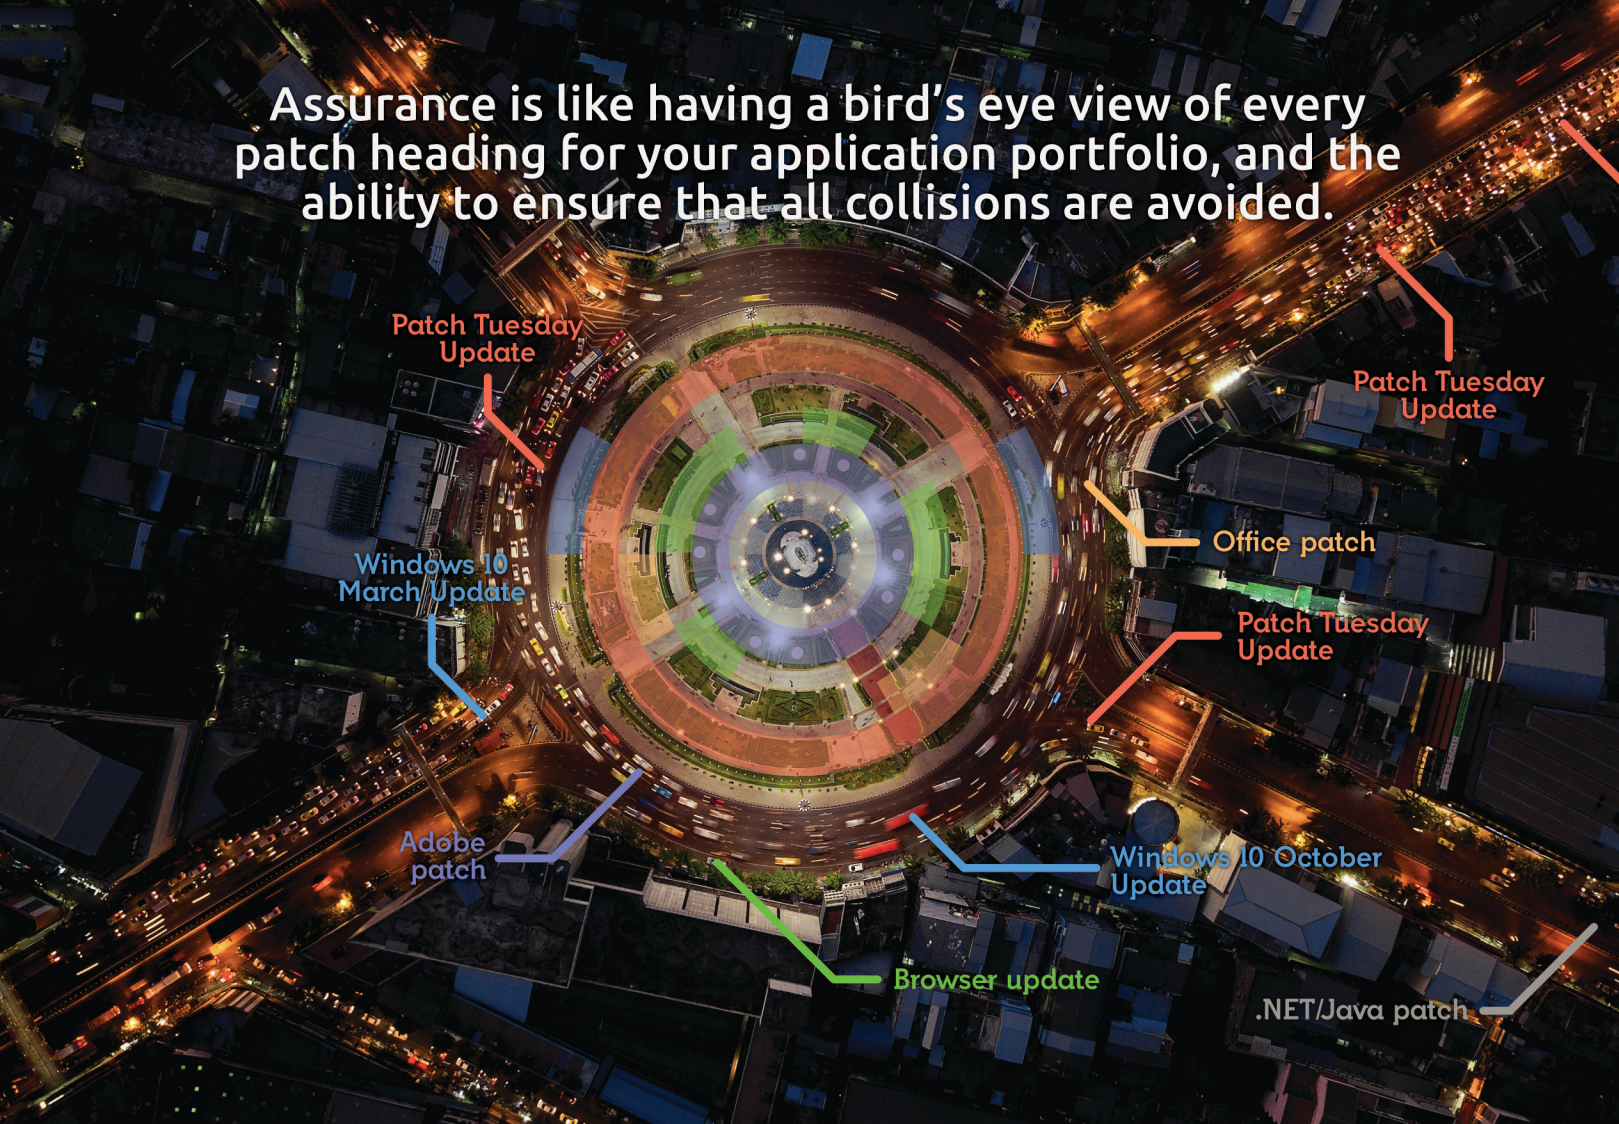

Windows 10
Major update every March and October

Dec

There's risk inherent in missing a patch, particularly for security.

But what about the **risk to your company if you DO apply the patch**?

Wouldn't it be great to to look into the future and know what will happen to your applications when that patch is applied?

Assurance is like having a bird's eye view of every patch heading for your application portfolio, and the ability to ensure that all collisions are avoided.

Readiness employs thousands of algorithmic rules checking for potential issues. This provides an in-depth understanding of what may cause an application to fail to install, run, update or uninstall correctly.

Dynamic Platform Assessment

Knowing which updates and changes to deploy and their potential impact is critical for managing complex inter-connected systems employed by most enterprises. Readiness offers the ability to demonstrate what may happen to applications (through what-if scenarios) **before you deploy or make any changes to your target system**. Once assessed, you can determine which applications are affected, and in most cases what functionality or component may not function as intended.

Readiness offers a unique, cloud-based application service that delivers real-time reports on potential issues with Microsoft patches and updates. **Readiness is the only solution that matches Common Vulnerability Entries (CVE's) to application components**, delivering a risk-based approach to deciding what patches and changes to deploy and understanding the potential impact on deployed applications.

Zero Infrastructure.

Readiness is the world's first entirely cloud-based, dynamic, on-demand system for automatic application assessment, remediation and conversion of all your applications. It requires no infrastructure or investment.

Readiness
ASSURANCE.

Continual risk assessment of the changes to your application portfolio.

Understand the risk of every patch.

Better visibility =
NO SURPRISES.

- Deploy patches faster

- Stay in compliance

- Use a risk-based model for updates and changes

- Save testing time, money and personnel resources through better, targeted testing

- Support helpdesk debugging efforts when changes have been implemented

Readiness.
