# Sage on Azure

**Begin your Sage journey to the cloud on your terms with the power and intelligence of enterprise-class Azure infrastructure.**

Running Sage applications either as a **new customer** or you want to **lift & shift** on Azure which enables businesses to accelerate the speed of doing business nearly anywhere, anytime with the choice and flexibility of the cloud. It helps businesses focus on value-add customer experiences, while streamlining infrastructure and delivering cost savings, - on their path to digital transformation.

Businesses worldwide are increasingly looking to the cloud as the preferred location for deploying and consuming software. As small to mid-sized enterprise businesses become more comfortable with hybrid and cloud-only deployments, the depth and breadth of ERP and CRM workloads provide compelling scenarios. To meet the market demands and expectations, **Sage end to end** On-Premise solutions are supported to run on Azure or **Hybrid**. Now you can run it in your own data center, or host Sage to run fully in the cloud to help you move faster, do more, and save money while utilising the power of Azure, in the way that best suits the needs of your business.

## Benefits

- SLA for almost permanet uptime guaranteed by Microsoft.
- You choose the data centre to run from, from 50+ regions.
- Deploy faster with Cloud-Based services.
- Shift capex to opex – Focus more on projects that drive impact for the business.
- Manage peak and Elastic demand in a digital world.

## Rationalise IT investments and reduce operating costs

- Easily scale up (or scale down) different Sage Dev / Test / Production Environments
- Get a global, hyper-scalable Azure infrastructure that saves you money by only having to pay for the resources that you actually use
- Enable world class security monitoring through pro-active activities

## Enable rapid business transformation and intelligent operations

- Continue to use the Sage tools and applications you are already trained on, familiar with and use every day, to bring greater business efficiencies
- Enable the discovery of new lines of business with IoT, the Internet of Things, and use it to help re-imagine and identify new business opportunities

## Gain distinct business value through speed and flexibility to support new business initiatives

- Acquire and deploy hardware in just a few hours
- Focus on key business objectives, rather than hardware issues
- Enable backup and disaster recovery fast and seamlessly
