Azure Migration Services

Support a seamless transition to the cloud

While the cloud has introduced massive innovation opportunities for companies to help fuel their digital transformations, many fail to take full advantage of the cloud's business potential. These shortcomings often come down to a lack of cloud knowledge and insight, a lack of dedicated resources, and sometimes, both.

Now, with Azure Migration Services, accelerate application migration and enhance your workloads in the cloud by building a sustainable, cost effective and automated cloud platform that empowers your IT team to do more.

Benefits

1 Quickly and efficiently establish your Azure Cloud infrastructure and set up the required core cloud capabilities during environment setup.

2 Reduce business disruptions and help to achieve consistency during migration using specialized Azure Migration engineers.

3 Continuously upskill technical teams throughout the migration process, empowering them to enhance your cloud capabilities.

4 Gain valuable insights into the state of your business so your IT team can adapt and respond quickly.

Azure Migration Services

Features

Build a modern cloud platform

Drive application standardization and lay the foundation for a scalable cloud platform with end-to-end governance and security controls.

Standardize with a proven migration framework

Boost cloud migration and predictability to help increase efficiency and consistency, all while reducing business disruption.

Refactor applications for Azure

Create entire application environments quickly through automation and refactor systems to introduce cloud-native resilience and scalability.

Transform with intelligent insights

Enhance IT operations using big data, machine learning and predictive analytics to support monitoring, logging and automated resolution.

Use case

Fortune 500 accelerates migration to Azure

CHALLENGE

Over five years, a leading Fortune 500 retailer was undergoing rapid organic growth and found over 50,000 unmanaged cloud resources that needed to be migrated as part of their cloud transformation.

SOLUTION

The company turned to PwC's Migration framework to help create a standard process, controls and automation workflow to migrate their unmanaged resources to their Azure Managed Platform.

RESULTS

The retailer is now about to accelerate their migration across 600+ Azure Resource Groups – cutting end-to-end migration times down to one third of the typical duration, all while driving app standardization.
