

CS Azure Hybrid Cloud.

Complementary services to boost your individual Cloud Journey with Azure.

When companies start their cloud journey, they often start to build their cloud nucleus as a distinct environment, thereby duplicating the management layer to run their IT. Once the cloud environments grow, this becomes an issue. CS Azure Hybrid Services aims at helping companies to set up and run their IT environments across multiple clouds and on premises via an integrated management layer.

Common Control Plane

- Manage remaining Edge IT via an integrated control plane in your Azure environment
- Ensure consistent management of your AWS and Google cloud workloads

Provider Management

- Allow third parties to manage workloads in your Azure tenant at scale
- Ensure definite control over the scopes assigned for management and permissions

Integrated Monitoring

- Collect, analyze and act on telemetry data from your Azure and on-premises environments
- Provide an integrated threat detection and response control plane (SIEM)

Advanced Security

- Manage IAM and security across multiple cloud environments.
- Add threat protection and implement data governance to secure your cloud and on-premises workloads

CS Azure Hybrid Cloud – professional services to master your cloud journey.

In order to succeed in the cloud transformation, a specialized partner can help to achieve the goals of your digital transformation projects faster and with less friction: from identifying the use cases that matter most, to conception and technical implementation of the platform. Our Azure Hybrid Services cover everything you need and pick you up right where you stand.

Campana & Schott

is an international management and technology consultancy. For 30 years, we have been providing companies with holistic and passionate support in mastering complex change processes – with proven methods, technologies or simply the right people.
