Securing your cloud environment

Cloud environments provide new and unique challenges for security teams. Campana & Schott supports security teams to implement state of the art security approach for cloud environments.

Challenges

- Cloud specific security risks arise
- Traditional on-premise security approaches are not sufficient for cloud
- Often multiple cloud providers need to be secured

Ideal Solution

- A security solution is designed that allows support for securing all relevant cloud services
- Modern security approaches using Zero Trust as the foundation are incorporated

Desired Outcomes

- Quick wins to roll-out additional security measures for cloud services already in-use
- Roadmap and overall strategy for securing existing and future cloud workloads
- Identity based Zero Trust cloud security concept is defined

Campana & Schott. Cloud Security Implementation.

Our mission is to **secure your cloud journey** by providing a Zero Trust based security approach for all cloud services. We guide you along the process from security strategy, over quick wins to the overall implementation.

Let's define the strategy

- First, we review the existing cloud services and providers in use and current security approaches
- Second, we assess your security needs and business criticality
- Third, we derive a high-level security standard & strategy as well as quick wins to enhance cloud security

Implement new security standards

- Quick wins are prioritized and implemented first
- In a second step, we will implement required security solutions focusing on the Microsoft Defender for Cloud solutions as well as Azure AD for Zero Trust Identity Management & Governance
- The implementation will also include planning & preparation for securing future workloads to ensure that new services will also be automatically secured.

Strong partnership. Microsoft Security + Campana & Schott.

Microsoft's long-standing partnership with Campana & Schott has proven as key success factor in many projects before. We combine Microsoft's Cloud Security solutions with our consultancy approach to develop and implement Zero Trust cloud security solutions. Clients trust our execution excellence.

Best Practices + Hybrid Cloud Security Workshop

- Microsoft provides an out of the box workshop format to get started with cloud security approaches.
- Campana & Schott provides real world experiences and best practices to provide a workshop tailored to fit your needs.

CS Zero Trust + Azure AD & Microsoft Defender

- Proven approaches from Campana & Schott to implement Zero Trust approaches using Microsoft technology
- Best of breed technology to secure & manage identities and provide threat protection in a hybrid & multi-cloud environment.

Customer success: Secure cloud operations – now and in the future.

As an innovation leader in the solar technology business our customer pursues a cloud strategy. It was quickly noted that moving to the cloud would also require securing the new cloud workloads. In a joint approach a hands-on strategy was defined and implemented step-by-step.

Project approach

- **Hands-on approach** – our security implementation approach provides guidance and structure for the various stakeholders
- **Fast Results** – we develop a security approach & strategy while focusing on quick wins and near-term implementation
- **Power of Three** – Microsoft, CS and the customer work closely to develop a joint recommendation

Proven methods and assets

- We provide profound expertise for Zero Trust approaches
- Our team has extensive knowledge and experience with Microsoft Security technologies
- We get things done, with the right balance between systematic planning and hands-on mentality

Tangible business outcomes

- Cloud security strategy & roadmap that show future approach for securing your cloud workloads
- Quick Wins analysis and implementation to have an immediate impact on improving cloud security
- Long term security by also including approaches for securing future cloud workloads
