Cross Industry: Migrate on-prem apps to Azure

There are many reasons to move apps to the cloud and even more ways to get there. But where do I start? How much will it cost? Which managed Azure services can I use to simplify and optimize my application landscape? This offering will provide you with the expert knowledge to develop a tailormade roadmap to move your app to the Azure Cloud.

CHALLENGES

Cloud infrastructure and cloud operating models differ significantly from on-prem. To benefit from the cost and agility advantages that the cloud offers, legacy applications need to be modified to leverage the target platform. This requires a huge amount of knowledge and experience that cannot be acquired overnight

IDEAL SOLUTION

We offer a 3-day assessment package to; clarify the business priorities, examine the legacy architecture & source code, identify appropriate Azure IaaS and PaaS services for the app, design a new target architecture. and create a migration plan with milestones and cost estimations.

DESIRED OUTCOMES

Following the assessment you are; aware of the feasibility and risks, have an estimation of the time needed and cost for the migration project, have an estimation of the operating costs / year of the app on the Azure platform, have a target cloud architecture, and have a migration plan. You have everything you need to make a management decision on the project.

PRODYNA

App Migration Assessment

In 3 days from zero to management decision ready

1

REDUCED RISK

We have years of experience in software engineering, assisting enterprise customers with their cloud architecture and re-factoring applications for cloud migration.

2

RAPID START

We're not doing this for the first time, we have a tried and tested methodology. After 3 days, you have a plan and are decision ready.

3

LEVERAGE AZURE THE RIGHT WAY

Application lift and shift is just infrastructure outsourcing and doesn't enable the cost, security, and agility advantages that Azure offers when a migration is done properly. PRODYNA can help you to get it right.

PRODYNA – APP MIGRATION WITH ATROPOSS & MICROSOFT AZURE

PRODYNA can help your organization to rapidly scale the use of Microsoft Azure throughout your organization by migrating your on-prem apps. Profit from our experience helping other customers.

Azure Compute

- App Services, Container Instances, Azure Kubernetes Service, Azure Spring Cloud, Azure has a plethora of compute options. We'll help you select and configure the most appropriate IaaS or PaaS compute services for your application

Azure Storage

- Azure SQL, Cosmos DB, Postgres for Azure and many more, Azure has a wide set of storage options. We'll help you select and configure the most appropriate for your app in Azure

First Azure Landing Zone

- Setup and connect first landing zone:
 - Spoke network connected to hub
 - Central auditing
 - Ingress/Egress traffic filtering via firewall
 - Custom private DNS domain resolvable from within Azure and on-premises networks
 - Preconfigured services secured with private endpoints (e.g., Keyvault, storage).

APP MIGRATION ASSESSMENT WITH ATROPOSS – MIGRATE YOUR APPS TO AZURE TODAY
