

# Azure Health Check

Understand the Health of Your Cloud Environment

2019 MSUS Partner  
Award – Intelligent  
Cloud Azure  
Influencer

2018 Microsoft Open  
Source Data & AI  
Partner of the Year  
Award Finalist

## The State of Your Cloud Environment

ACTS' Azure Health Check is an entirely remote engagement that provides extended visibility into your cloud infrastructure. Our Health Check looks at key attributes in your organization allowing you to make well-informed decisions to optimize your cloud environment.

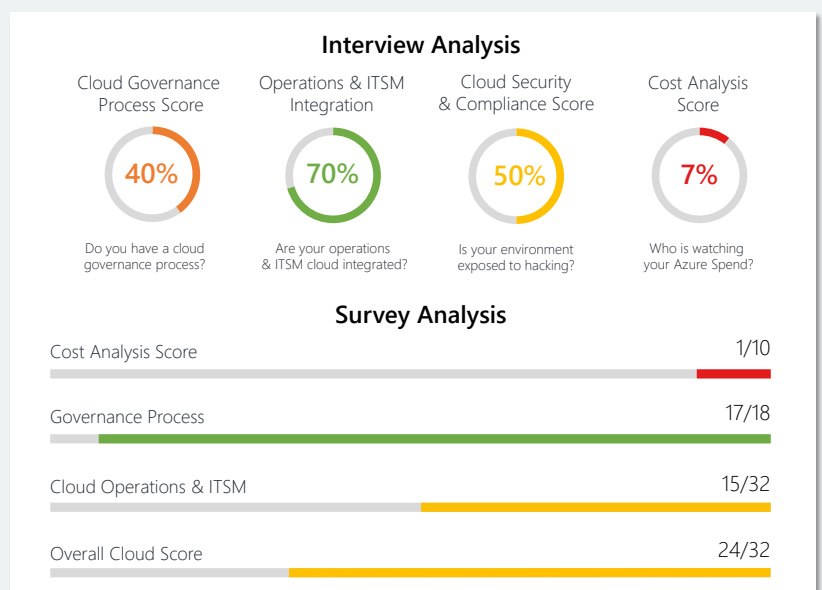

ACTS will partner with you to assess cloud governance, operations, security, compliance and cost. Under certain circumstances some or all of this engagement may be subsidized email [AzureHealth@actsolution.net](mailto:AzureHealth@actsolution.net) to see if you qualify.

The Azure Health Check helps to uncover gaps and vulnerabilities in real world cloud deployments that create significant reputational, security and revenue risks, **addressing many common hurdles such as:**

- Limited visibility into current cloud deployment, cloud security and compliance posture
- Unclear cloud resource costs, consumption, and utilization
- Absence of governance in the cloud causing resource sprawl
- Inconsistent automation and policy enforcement impacting cloud architecture and deployment

## Why Evaluate Your Environment?

- Full visibility into existing cloud environments (*no matter the company size*)
- Ensure the health of your cloud
- Reduce risk and gain insights

## Azure Health Check Pillars

### Deployment Summary

Evaluate your cloud organization structure, network, connectivity and business continuity plan

### Governance

Understand your current cloud policy, tagging and naming conventions

### Operations Management

Identify current processes for automation, monitoring and ITSM

### Security & Compliance

Reports on access management, network security and cloud security

### Cost

Recommendations to optimize your cloud spend across your environment

## ACTS' Consultative Strategy & Delivery Approach

-  **Discovery:** Capturing key attributes of your cloud environment.
-  **Data Gathering:** Assembling data and documentation.
-  **Assessment:** An evaluation of your current state.
-  **Analysis & Deliverables:**
  1. Using our evaluation we will help you visualize and document your cloud and on-premises environment.
  2. Summary of your current cloud architecture and actionable recommendations aligned to industry best practices in each of the following areas:

## Next Steps

Understand the Health of Your Cloud Environment.
