

Identity and Access Management: Legal Industry

In today's world, the threat landscape is evolving quickly for all businesses, large or small. Attacks are becoming more frequent and the stakes have never been higher.

Identity is Critical to Your Security

To counter threats, organizations need to reduce the number of usernames and passwords that end users are required to remember. Too many passwords tends to lead to insecure passwords and poor password management practices. Part of that effort must include a secure user identity repository.

Identity and Access Management Working Session

New Era Technology offers a solution to help provide you with a recommended path to ensure you can begin securing your environment and identities immediately. This session helps provide your end-users with the simplicity of single sign on and controlling access to the most important data in your organization with Conditional Access. During this session, New Era will sit down with you to understand your identity, security and access requirements. This typically involves a discussion around the following topics:

Single Sign On: Being able to log in to applications using a single identity is a huge step forward in the effort to improve end-user experience.

Multifactor Authentication: MFA has been shown to prevent the most common identity breaches by up to 99%. We'll show you how easy it is to get set up.

Conditional Access: Control which applications a user can access, from where, and on what device, using Conditional Access.

Working Session Features

- Enable Trial Azure AD P1 license
- Review existing tenant Security Score
- Assist with configuration of Azure MFA
- Configure and test up to two conditional access rules
- Review and configure Default Identity Protect Policies
- Create at least 1 restricted policy associated with a specific
- SharePoint library to ensure proper document protection
