Veeam Backup for Microsoft Azure

Native Azure Backup and Recovery

Veeam Backup for Microsoft Azure offers your business a range of effective tools that make it simple to manage, safeguard, and protect your data.

Eliminate the danger of data loss on Azure while making significant savings thanks to Veaam Backup for Microsoft's cost-effectiveness, security, and scalability features. To simply manage and safeguard all your Azure data, Veeam Backup for Microsoft Azure offers native, fully automated Azure backup and recovery. With Dimension Data the security of your data, as well as on-premises resources and the cloud components you manage are protected through Veeam's backup for Microsoft Azure. Through this offering, your organization is able to retain business-critical data required for you to have complete access and control.

You have a limited amount of access to and control over your personal data without an Azure backup. Data loss risks and gaps in retention policies can cause you to lose data. Additionally, you expose yourself to significant internal and external security threats, regulatory exposure, and other dangers.

Benefits of Veeam on Azure:

- Low-cost Backup
- One platform
- Greater security and management
- Fast and flexible recovery
- Cloud mobility
- Set and forget simplicity

Simple Disaster Recovery

Veeam simplifies recovery of large environments thanks to bulk recoveries, which enable Administrators to recover data of multiple users in a single operation, instead of manually recovering users one by one.

Flexible Recovery

Recover data exactly where you need it, whether it is to the original user or a different user, to Microsoft Office 365 or to on-premises, or in an alternate manner (i.e., via email).

Freedom

Veeam gives you full control over your data location, as you can store backup wherever you want, whether on-premises on any hardware, on the cloud, or at Service Providers.

Flexible Backup

Veeam enables you to provide different levels of data protection to different users by setting up multiple backup policies per Microsoft Office 365 organization. Veeam also enables you to customize backup schedules, so to adjust backup frequency to your business needs.

How Veeam for Azure works to achieve business benefits

Dimension Data Solution

- Veeam simplifies recovery of large environments thanks to bulk recoveries, which enable Administrators to recover data of multiple users in a single operation, instead of manually recovering users one by one.
- Recover data exactly where you need it, whether it is to the original user or a different user, to Microsoft Office 365 or to on-premises, or in an alternate manner (i.e., via email).
- Veeam gives you full control over your data location, as you can store backup wherever you want, whether on-premises on any hardware, on the cloud, or at Service Providers.
- Veeam enables you to provide different levels of data protection to different users by setting up multiple backup policies per Microsoft Office 365 organization. Veeam also enables you to customize backup schedules, so to adjust backup frequency to your business needs.

Joint Solution

- Scale and manage the protection of all workloads across your Azure subscription.
- Centralize Azure backup under a single platform with other workloads.
- Integrate and automate Azure backup with other workflows and apps.
- Protect your data with policy-based automation and labels.

Tangible Benefits / Desired Outcomes

- Create image-level backups and cloud-native snapshots of Azure VMs.
- Restore entire Azure SQL databases, Azure VMs, individual virtual disks, and guest OS files and folders.
- Keep the backed-up data in cost-effective and long-term Microsoft Azure storage accounts.

Why Dimension Data?

Dimension Data has a proven track record as a Microsoft partner with a large skilled and experienced team of Microsoft-certified specialists. From consulting to managed services, we keep your enterprise applications responsive and reliable, enabling collaboration and a platform for innovation. We assess current IT landscape, deliver recommendations and a roadmap for optimization and then consolidate and migrate your applications to the cloud. Along the way, offering guidance through complexities and intricacies. Dimension Data offers bespoke business solutions using a SAFe Agile methodology and globally integrated ITIL processes. With our highly skilled application, Azure migration and advanced networking teams, we guarantee excellence in delivery. Dimension Data is able to provide a full end-to-end solution to an organization in every industry vertical. We can provide a differentiation on tools you use daily and in turn a better experience when utilizing Microsoft services on our network. Our capability across the full IT stack enables us to provide supporting services giving you an advantage.
