MAPPEDIN SDKs

WEB, ANDROID, iOS & REACT NATIVE

Mappedin's Mobile and Web SDKs have been built to enable all indoor mapping experiences. Regardless of industry, our SDKs encompass a wide variety of components required to integrate mapping into a website, mobile application, or custom directory.

SDK COMPONENTS

Getting Started Guides

Follow our step-by-step guide for setting up a new venue to get the core elements running before incorporating the features unique to your experience.

Sample Applications

Leverage our sample applications across a variety of use cases and experiences to get up and running quickly.

Robust Documentation

With well documented resources for all features and components offered across iOS, Android, Web and React Native SDKs, building your own mapping experience is simple.

Real-Time Data Syncs

Maintain your location data in Mappedin's CMS or an alternate and see changes reflected in real-time API syncs and use External IDs to layer on additional data. These features make Mappedin SDKs well suited for integrations with software suites across all industries.

ADDITIONAL FEATURES & BENEFITS

- Offline Mode
- Follow-up Mode
- RTL Text
- Developer Support
