

CLOUD CARBON REDUCTION CALCULATOR

WHAT IS IT

- A tool that enables customers to see how much they could reduce their carbon emissions* by if they moved to cloud
- Requires either an Azure Migrate report or an approximate current state/target state data
- Rapid turnaround on carbon reduction reporting – can be achieved in minutes
- A full detailed report can be unlocked to show how to achieve this reduction as well as how to reduce it even further
- A great accelerator for facilitating an AMMP conversation with a customer

*estimations

REQUIREMENTS

Azure Migrate Report

OR

Current vs future state data (VM's on premise, VM's in cloud, VM's in scope for migration and retiring)

PROCESS

1. Customer uses calculator to get a high level figure
2. Kainos and MS present a more detailed report to customer
3. Customer engages with MS and Kainos for cloud migration and modernisation
