

RAINBOW SECURE SSO FOR APPS

Secure and seamless access for all your users on cloud, mobile and on-premise

Apps are proven tools that deliver efficiencies to modern business. Apps now live anywhere: on a public or private cloud, on-premises, and on mobile devices. And your workforce accesses these apps from anywhere, at any time.

Rainbow Secure offers an integrated identity and Single sign on (SSO) to manage a common identity for each user across your cloud & hybrid infrastructure. Centralize app management with next gen login graphical security authentication reinforces your security posture, enhance user experience, and improve IT efficiencies.

Get industry-leading security: Improve security with multi-layer authentication & applying granular risk-based controls to all SaaS and on-premises apps.

Improve user experience: Reduce sign-in friction, login stress, & forgive user mistakes. Simplify app access with Rainbow Single Sign-on (SSO), your custom branded App Dashboard.

Reduce costs: Automate identity provisioning workflows and enable self-service tools to save time and money.

Key features

Rainbow Secure Identity & Single Sign On offers simple, centralized app management that delivers peace of mind for users and IT administrators plus seamless, secure, stress free access for every app through features like:

Identity protection: Intelligently detect and remediate to compromised accounts.

Conditional Access: Enforce strong security policies and risk assessments when granting access to employees.

SSO: Save time with seamless and secure app access.

User app portal: Simplify app discoverability and access with all apps in one location

Automated user provisioning: Reduce costs with automated creation, maintenance, and removal of user identities and group level access for teams.

Graphical Color & Style based Security: Reduce IT support time by enabling use of colorful passwords, zero-trust passwordless OTP logins, & self-service account resets, thus lowering need for support tickets.

Manage all apps

Cloud and SaaS apps: Configure and connect hundreds of pre-integrated apps to your custom Single Sign application gallery. Give users SSO access to the apps they need, and automatically provision or deprovision user accounts

Legacy and on-premises apps: Provide seamless, secure Single Pane of glass access to legacy apps hosted on-premises or in any public or private cloud environment thanks to Rainbow Secure's flexible dual handshake APIs and robust cloud infrastructure.

Custom apps: Build native apps with best-in-breed identity and security features like multi-layer graphical password & passwordless zero-trust logins, SSO, AI Monitoring, Risk Analytics, and threat alerting.

Hundreds of Apps you can integrate with Rainbow Secure including Office 365, Dynamics, PowerApps, Google Workspace, IBM Aspera, Workday, NetSuite, Snowflake, ServiceNow, Salesforce, SAP, Slack, Zoom, ZenDesk, Dropbox, and custom Apps on Azure, AWS & Google Cloud Platforms.
