

Bytes Workload Innovation Workshop

To get the best out of the cloud, you should be using cloud-native technology.

The **Platform-as-a-Service** offerings are easier to manage, usually cheaper, and scalable by default. Shifting the management overhead of the infrastructure to Microsoft and saving money on run-time costs should be part of any organisation's long-term strategy.

During the Bytes Workload Innovation Workshop

Bytes will work with you to review your existing workload(s) and plan a **Workload Innovation strategy for Azure**. We can help you modernise your applications onto a platform that is versatile and user friendly.

How it works

Stage 1 Discovery

Review current workload(s)

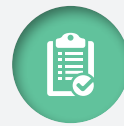

- ✓ High-level overview of workload innovation options
- ✓ Discuss suitable PaaS offerings, and the capabilities and constraints of each in Azure
- ✓ Deep dive into the application to understand application mapping and dependencies

Stage 2 Security & Governance

Subscription Management

- ✓ Management Groups
- ✓ Azure Policy
- ✓ Role Based Access Controls (RBAC)
- ✓ Networking
- ✓ Naming Conventions
- ✓ Tagging
- ✓ Azure Monitor
- ✓ VPN

Stage 3 Recommendations

- ✓ Proposed solution and migration method documented
- ✓ Estimated Azure costs
- ✓ Handover meeting

Count on us

We will work with your application owners over a series of workshops to better understand your applications. Concentrating on a workload at a time, we go through the application, understand its dependencies, and suggest a suitable platform for the application.

We engage with your team for a **deep dive into your application functionality**. We will discuss the **restraints and limitations of each of the PaaS options**.
