

E42 AI IT Ops Manager

Struggling with the time and attention of your IT Staff?

Losing sleep over continuous monitoring requirements for your IT Environment?

Your AI IT Ops Manager is here to take control!

Let the humans take care of complex initiatives for business performance and stability while your deployed AI co-worker effectively handles the overwhelming load of day-to-day mundane tasks.

An **AI IT Ops Manager** will be in charge of running smooth and automated routine practices. It will recognize issues in time with greater accuracy than humans and streamline interactions between groups and teams by providing relevant data. It will proficiently raise a red flag and notify you over inconsistencies in the system. Along with that, it will take care of incidents raised by users via a ticketing system.

Increase your business' operational efficiency with features such as:

- Instant Support
- Incident reporting
- Incidence monitoring
- New Service Requests
- Support scheduling

Get automation driven insights for continuous improvements, fixes and enable overall innovation by enabling your IT operations through analytics and machine learning.

Reduce unnecessary human intervention, boost productivity & increase overall efficiencies along with keeping track of SLAs.

Build your **AI IT Ops Manager** on the no-code E42 platform today and act on your data proactively!
