Crayon Azure Modern Data Warehouse

Crayon Azure Modern Data Warehouse is a solution addressed to organizations that want to effectively use the collected data to make business decisions.

Features:

• modern, comprehensive and unified platform for data analysis
simplifies the process of integrating data from various sources
• combines data integration, storage and exploration of enterprise data with big data analytics
provides secure access to data
• makes it easier to share data inside and outside your organization
reduces the costs of integration with the MS Office environment
• facilitates decision-making with attractive data visualization
integrates with a machine learning platform to automate the data science process

Project:

• assessment of the analytical environment and solution roadmap
Azure Landing Zone configuration
• business area analysis and migration plan
implementation of a data warehouse
• building a data model
preparation of the report and the dashboard
final tests and environmental stabilization
• knowledge transfer

Deliverables:

• knowledge transfer on Azure and Microsoft Power BI analytical technologies
the concept of a modern data warehouse
• reference architecture
cost estimation
• description of selected services
• solution roadmap with management summary, business areas and their implementation priorities, business goals, use cases,
• description of the team's competences and ways to supplement them
identification of project risks
• infrastructure concept
configured Azure Landing Zone
running analytical components included in the architecture
• prepared data warehouse structures
data model for the selected business area
• Power BI report and dashboard
support in production implementation and environmental stabilization
post-implementation documentation
• operational standards
