Azure Backup - Proof Of Concept

Azure backup center is a solution that allows organizations to manage easy and natively backup/restore on Azure Platform for virtual machines, sql on virtual machines, storage files and so on.

Learn how to govern and manage the backup/restore process with our competency and discover the cloud advantages with PAYG model cost-effective, more

scalable and without the operating and maintenance costs of the physical part of a data center, just worry about execute your backups.

Thanks to this service provided as PaaS and fully integrated into the Azure portal, the backup process is simplified, at-scale and secure and it is easier to schedule the jobs and manage complexity of the process.

◆ OUTCOMES ◆

Conduct workshops to present, discuss and explore initial Azure Backup solutions; explains proposals and start with Azure Backup setup and testing the backup/restore process with a pilot project.

We'll work with you to:

- Define and open Azure Subscription on our CSP if need.

- Deploy the Azure Backup resources, resource groups, etc.

- Setting up Azure Backup services, jobs, criteria.

- Explain how to backup/restore 1 virtual machine, granular database restore on 1 sql server on virtual machine, backup/restore 1 azure files share.

- Explain how to use Azure Backup Center to monitor jobs and integration with Azure Monitor alerts for backup failures.

◆ CAPABILITIES ◆

Workshop to design and learn Azure Backup solutions

Deployment phase to deploy Azure Backup , setup and other initial settings
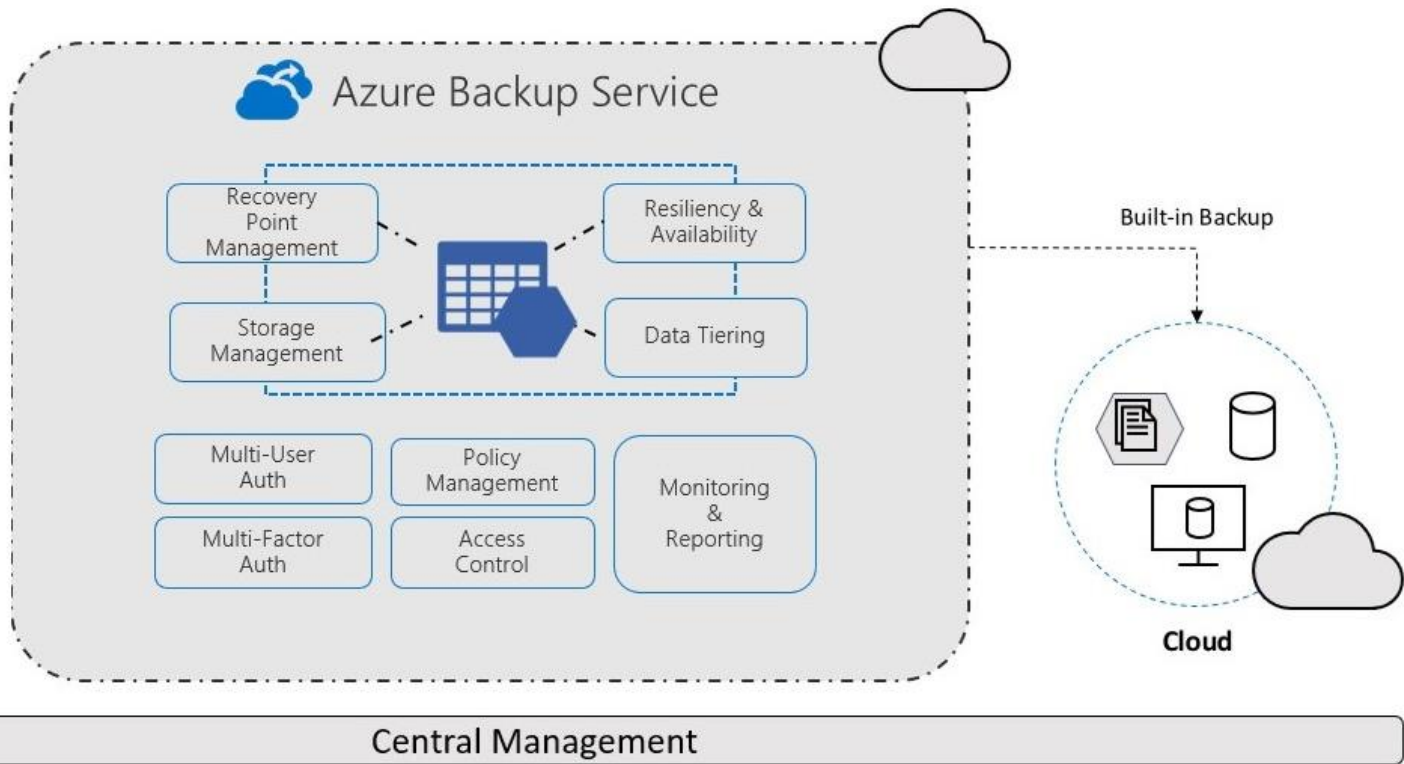

Learn how to backup/restore some workloads and test it on a vm

Provide presentation to IT manager to explain process, recommendations and next steps

Duration: 1 Week
