

The logo for xpanDit features a stylized 'x' icon on the left, composed of two overlapping, slightly offset shapes that create a sense of depth and movement. To the right of this icon, the word 'panDit' is written in a clean, white, sans-serif typeface. The letter 'D' is notably larger and more prominent than the other characters in the word. The entire logo is centered horizontally on a dark teal background.

# Customer Facing Apps

## Technology

**We focus on delivering great experiences to users, whether they are on a mobile device or on a browser** – using technologies like Xamarin and Sitecore. And in order for those experiences to be fully personalized and relevant, we rely on Azure Services that range from App Services to APIM Management, Cosmos DB to Cognitive Services, among others.

# Customer Facing Apps Reference

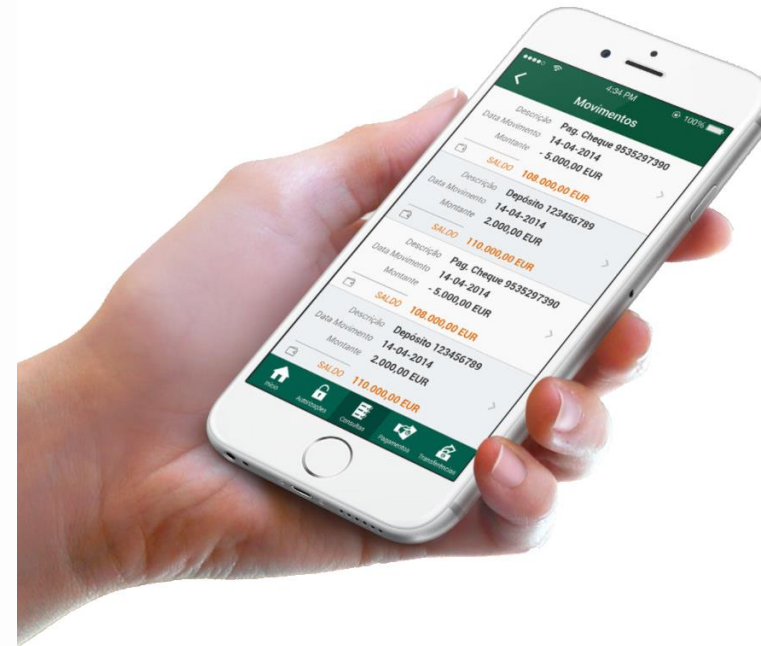

**Enterprise banking cross-platform apps**

**CA**  
Crédito Agrícola

Crédito Agrícola is one of the largest banks in Portugal, serving more than 1.2 million customers across 700 locations. The bank has prospered over the past 100 years through strong customer service - and keeping an eye on the future.

“The user experience is very important to us. One of our requirements was that the app for each platform offered the usability that the users expect. There can be no compromises and, with Xamarin, that’s what we have achieved.”

Jorge Correia, Applications Development Director at Crédito Agrícola

# Business-Driven Backends

## Technology

Business have high expectations regarding the role that technology can have to impact their Operations and the relation with their customers.

**We focus on developing solutions that take advantage of the Cloud, by using different components from Azure, including Databricks, Event Hubs and API Management, among many others.**

# Business-Driven Backends Reference

At Sonae Financial Services, we look for partners who challenge us to take full advantage of cloud technologies and boost our business.

We've found with Xpand IT a partner that adds technological value and helps us improve our value proposition while being able to adapt to our needs with the agility that today's real-time businesses require

# Employee Empowerment

## Technology

---

Technology has really come a long way when it comes to supporting Business Users in their needs – especially when they want to move forward with Digital initiatives with which IT cannot help.

**Using technologies like PowerApps and Flow we are able to create a momentum that empowers internal users to be solution developers** – focusing from the beginning on how to ensure adoption. Also, in order to make sure the project is a success, IT is involved from day one to be a part of Governance and Security decisions.

# Employee Empowerment - Reference

“

Our focus is to ensure that train drivers have the necessary tools to ensure the highest standards of performance and safety, as this is what defines the quality service that passengers can enjoy when travelling on Fertagus' trains.

In partnership with Xpand IT, we've developed an application using Microsoft Power Apps technology which allows train drivers to consult updated and accurate information on the fleet and also report technical incidents to maintenance services. At the same time, it provides our drivers with updated regulatory information, eliminating the need to print these documents.

With Microsoft Power Apps, this application's time to market is much shorter, allowing the app to run in record time and still be agnostic of the device operating system, ensuring greater longevity of the solution.

”

Paulo Cerqueira  
Administrator
