we are
WAYNE HILLS . VENTURES

Wayne Hills. Ventures focuses on technologies and services that ensure happiness for people.

Wayne Hills. Ventures provides a service of the SaaS model that automatically creates video content using only the user's voice or text data using Hybrid Cloud (On-premise), a new method that enables video content production in any environment.

Suppose you make a document of 20 pages in video form.

10 minutes max!

Easy	Fast	Fully automatic	Anyone can use

It is said that a picture is worth a thousand words.

Video usually consists of 30 frames per second. A video of one second has a worth of 30,000 words.

The global digital video content market is continuously growing around the world. With the emergence of the zero text era, intuitive and easy-to-understand video content is taking over.

Video content production, however, is still recognized as the domain of experts as there are many functions that require specialized skills, causing a high barrier to entry.

the easiest way to make videos

**TTV A.i** TEXT to VIDEO

TTV is a technology that converts text into video.

When you input data in the form of text, AI produces a video similar to text entered through a process of text summary, translation, sentiment analysis, and keyword extractions.

STV A.i SPEECH to VIDEO
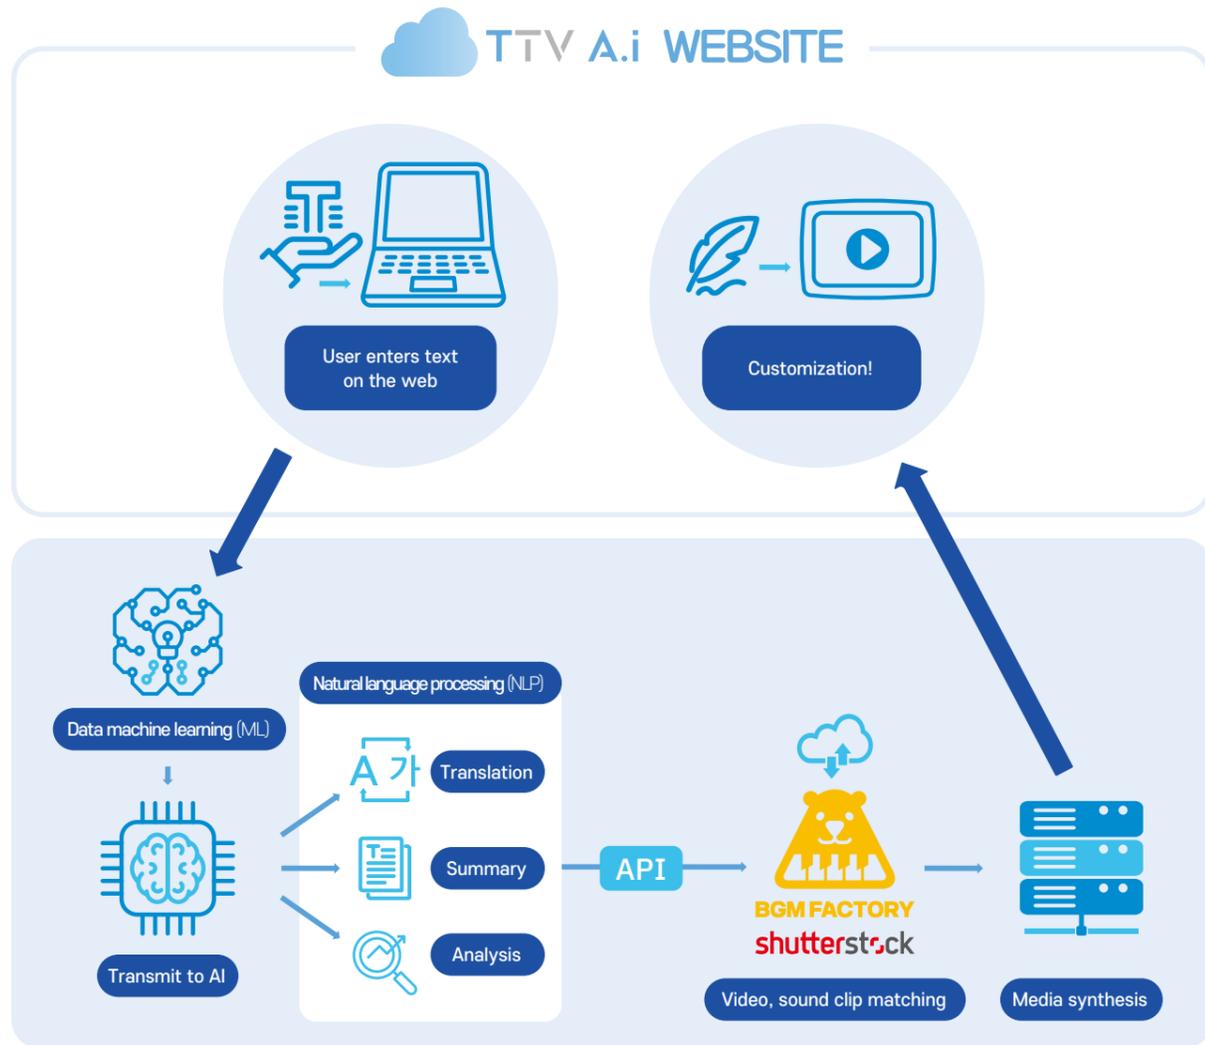

STV refers to a technology that converts voice into video.

When a user inputs voice data, a voice recognition model recognizes the data and converts it to text.

Using the converted text data, Wayne Hills' AI creates a video similar to the input voice data through the process of text summary, translation, sentiment analysis, and keyword extraction.
