

CLOUD CONNECT ASSESSMENT

THE GATE TO THE CLOUD

What overview do I get with the CCA at a fixed price?

Status Quo of your IT systems

List of implementation costs

Overview of necessary measures and licenses

Realistic project schedule

Consideration of individual wishes and needs

Concrete and individual project planning

Through a thorough analysis and inventory of your IT infrastructure, the Cloud Connect Assessment forms the basis for all measures associated with your migration to the cloud. The results of the CCA form the basis for the cooperation between our customers and us and show you the way to the cloud-based future.

The **HAFN IT Cloud Connect Assessment** provides a common thread to ensure that your digital transformation is structured, coordinated and transparent, without the need for lengthy workshops, but based on your requirements. Through our proven four-phase model, we develop a detailed concept for your digital transformation. And at a fixed price. Based on the detailed concept, you decide whether you want to implement Microsoft 365 independently or have HAFN IT do it for you.

What advantages does the CCA offer?

Documentation of your IT systems and mutual definition of goals form a transparent basis for cooperation.

All stakeholder groups on the customer side are taken into account from the outset in line with requirements.

A well-founded detailed concept with recommendations for action and an expenditure estimate forms the framework of the cooperation.

After migration, operation and support by us (against payment) is possible.

ALL SERVICES FOR A FIXED PRICE

With the Cloud Connect Assessment, we respond to the feedback and wishes of our customers for the introduction and operation of Micro-soft cloud services. For this purpose we have developed a FOUR-PHASE MODEL:

1. PHASE – ANALYSIS

Together we conduct an ACTUAL and TARGET analysis of the entire IT environment and processes. The goal of the analysis is a comprehensive, technical and process-related listing of your IT environment. This includes, among other things, servers, versions, users, mailboxes, Active Directory services, file, print, and cloud services as well as Windows versions.

2. PHASE - DESIGN

After the analysis phase, the goals are defined and individually adapted. Together, the further, strategic orientation is determined. A basic distinction is made here between cloud-only and hybrid environments.

Cloud-only: In this case, all services are fully migrated to the Microsoft Cloud. The aim is to outsource the entire IT environment to the cloud and switch off all your servers.

Hybrid: Here, local services are connected to the Microsoft Cloud and only selective servers and services are migrated to the Cloud.

3. PHASE – DETAILED CONCEPT

Based on the analyses, the objectives and the strategic orientation, we draw up a comprehensive detailed concept. The detailed concept contains all recommendations for the migration of your IT environment and clear recommendations on digital transformation, prioritization, implementation phases, schedules and licenses.

4. PHASE - HANDOVER

After finalizing the concept, we present it to you in detail and explain your path to the gateway to the cloud. This gives you a transparent and structured overview of your entire IT landscape. Based on the concept, you decide how to proceed, whether you want to carry out the implementation yourself, whether other service providers should be involved or whether we, HAFN IT, should accompany you during the implementation. You decide.

What scope of services can be expected?

Small 3.360€	Medium 4.000€	Large 5.280€	Enterprise 8.160€
------------------------	-------------------------	------------------------	-----------------------------

	1-20 User	21-200 User	<200 User
1-50 Server	Small	Medium	Large
51-200 Server	Medium	Large	Large
202-500 Server	Enterprise	Enterprise	Enterprise

For special compliance requirements, we make individual arrangements with you:

Medical Sector	Financial & Insurances	Agencies, Governments & Public Institution	Education	CISO
----------------	------------------------	--	-----------	------

WITH THE CLOUD CONNECT ASSESSMENT WE OPEN THE GATE TO THE CLOUD

HAFN IT focuses on medium-sized customers with 50 to 500 users in the areas of modern workplace and cloud data center based on Microsoft 365 and Microsoft Azure. Using standardized procedures, we accompany our customers into the Microsoft Cloud in a structured, transparent and plannable manner. In addition to technical implementation, we also provide specific support for the various stakeholder groups (management, employees, IT) in order to support our customers' digitization initiatives with a high level of user quality.
