NTT DATA Services

Protect Your Business Data for a Secure Enterprise

Data Classification and Protection Services by NTT DATA

NTT DATA's Data Classification and Protection Services help you:

- Protect sensitive information from unauthorized access
- Enforce policies that improve data security and enable secure collaboration
- Leverage Microsoft Information Protection
- Align our technical capabilities with your business and security objectives

All enterprises — small, midsize or startup — are being targeted for their business data. And the threats to mission-critical, sensitive and vulnerable data aren't limited to within the organization. The key is to stay one step ahead of every perceived cybersecurity risk and protect digital business initiatives across the ecosystem.
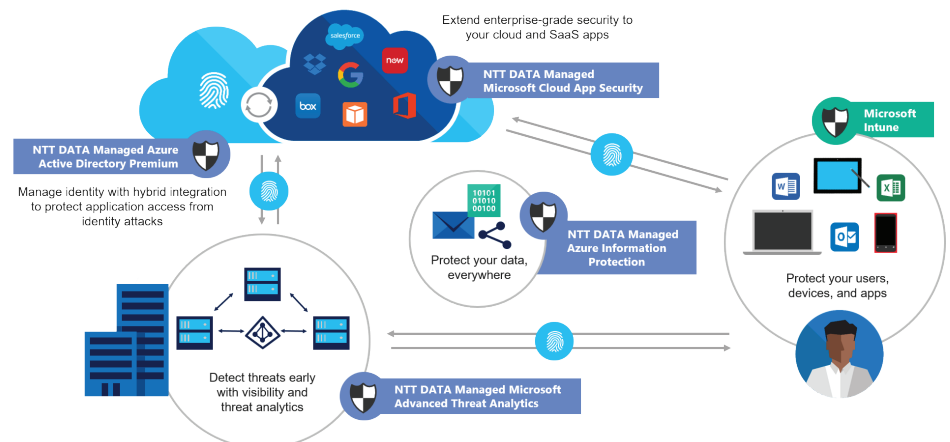

At NTT DATA, our advanced security solutions, security experts and risk management leaders work constantly to create and improve threat response strategies that will work for you.

We understand the value of your business data.

Defend your data from cyberattacks

NTT DATA Data Classification and Protection Services protects sensitive information from unauthorized access by enforcing policies that improve data security and enable secure collaboration. We leverage Microsoft Information Protection (MIP) as a critical part of our Zero Trust security architecture and ensure our technical capabilities align with your business and security objectives.

NTT DATA works with you to bring governance to your data

Extend enterprise-grade security to your cloud and SaaS apps

NTT DATA Managed Microsoft Cloud App Security

NTT DATA Managed Azure Active Directory Premium

Manage identity with hybrid integration to protect application access from identity attacks

Microsoft Intune

Protect your data, everywhere

NTT DATA Managed Azure Information Protection

Protect your users, devices, and apps

Detect threats early with visibility and threat analytics

NTT DATA Managed Microsoft Advanced Threat Analytics

Data Classification and Protection Services by NTT DATA

Using MIP as a critical part of your information security strategy allows you to:

- **Classify data based on sensitivity levels.** The user-driven classification is based on recommendations and leverages your corporate information protection classification strategy.
- **Protect data.** The all-pervasive data protection solution follows the complete data lifecycle. It remains embedded as an essential part of the document metadata, regardless of where it's stored (on-premises or in the cloud) or with whom it's shared.
- **Gain data visibility and control.** You can track activities on shared data and revoke access as and when necessary. MIP's powerful logging and reporting capabilities monitor and analyze user access to data.
- **Collaborate more securely.** Data can be shared safely with co-workers, customers and partners. Users can easily define who can access the data and what they can do with it. For example, you can allow a recipient to view specific files but neither print nor forward them to others.
- **Improve ease of use.** MIP-defined data classification and protection controls can be leveraged by other Microsoft solutions. We offer fully managed Microsoft Cloud App Security (a cloud access security broker solution) and Microsoft Defender for Endpoint services, as well as integration with a Secure Access Services Edge (SASE) solution to protect your organization from the data level to the network perimeter.

NTT DATA combines security expertise with the advanced features of Microsoft Information Protection to provide a robust and proven approach to data and content security with:

- **Advisory Services.** We propose a strategic approach to align MIP with your security framework, compliance requirements and application landscape, and enable a security posture that protects your organization from risks.
- **Implementation Services.** We deliver on the agreed outcome from the advisory session to ensure MIP is deployed and configured to best practice standards. Our phased deployment approach includes integrating your critical solutions to enable a robust solution that safeguards against malicious activity.
- **Managed Services.** We provide continual and comprehensive operational support, security posture optimization and audit support delivered by a senior cloud security engineering team to help future-proof your organization from complex and ever-maturing threat actors.

NTT DATA holds the key principle of considering the entirety of your IT stack with thought leadership and inclusive solutions in mind. Our Data Classification and Protection Services aligns with our overall security portfolio, which strengthens our ability to defend your organization against advanced cyberthreats.

MIP is positioned to integrate with our managed Microsoft Cloud App Security (MCAS) services. It provides the ability to gain deeper insights into a file's lifecycle and produce an organized labeling structure for increased visibility.

MIP's inherent labeling structure and security capabilities, provides Microsoft Defender for Endpoint and Azure Active Directory (Azure AD) services with the ability to minimize your attack surface through advanced threat detection and a cloud-centric lens of the identity landscape.
