Azure Landing Zone and Cloud Adoption Framework Essentials

Azure Landing Zone and CAF is a solution that allows organizations to deploy a cloud infrastructure aligned to Microsoft's Cloud Adoption Framework and Well-Architect Framework.

The Azure Landing Zone Essentials engagement will leave your organization with a production-ready, well governed and secure Azure environment capable of supporting new deployments or migrate virtual machines or other workloads to the Azure cloud.

Landing Zones save time and predispose the environment for successive scalable workloads while implementing an initial baseline through the creation of core resources.

◆ OUTCOMES ◆

Conduct design workshops to present, discuss and explore initial Azure design proposals and start with an essential implementation focus on infrastructure and networking foundation for virtual machines.

We'll work with you to:

- Define and open Azure Subscription on our CSP

- Network topology and connectivity: hub and spoke implementation, connectivity with on-premises with site-to-site vpn.

- Resource organization with resource groups, naming and tagging standard

- Basic guidelines for security (azure firewall and azure bastion implementation), compliance and governance

- Scalability, performance and zone redundant principles

- Azure billing, Cost Management and alerts for cost control

- Identity and access management/roles with Azure and Active Directory tenant integration

◆ CAPABILITIES ◆

Workshop to design landing zone and learn Microsoft Cloud Adoption Framework

Deployment phase to deploy hub and spoke, firewall and other resources to start with azure landing zone principles
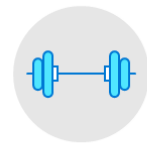

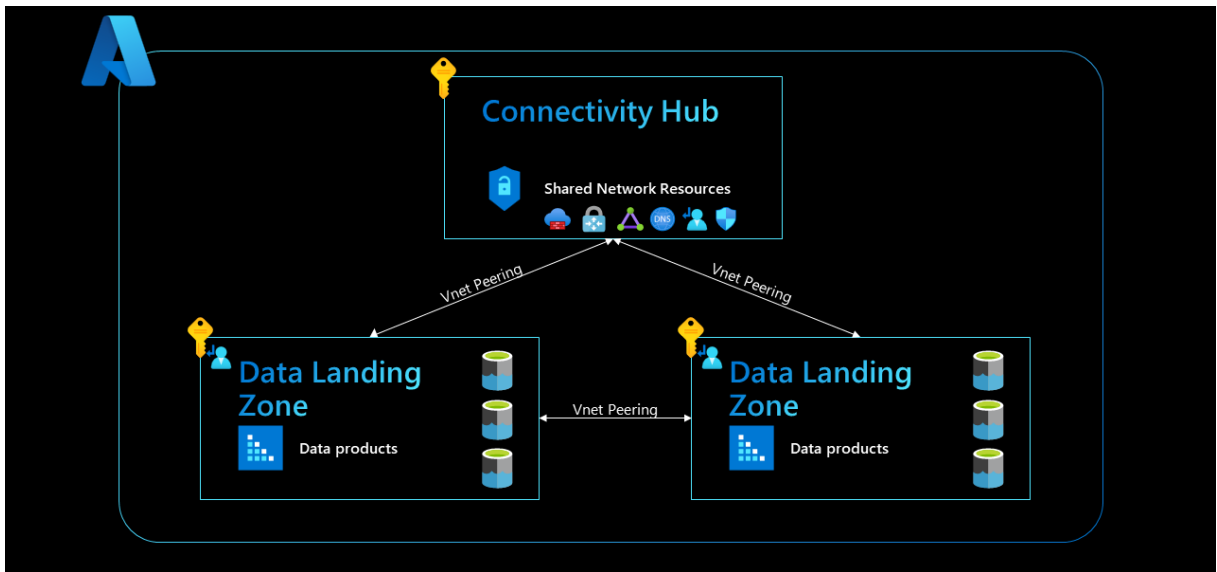

Start to operate with virtual machines on Azure and other basic Azure Operations

Provide presentation to stakeholders to explain design decisions, recommendations and next steps

Duration: 1 Week

Guide your cloud journey across people, process, and technology with the Cloud Adoption Framework

+

Build skills across your team with **Microsoft Learn**

Accelerate deployment with **Reference Architectures**

Optimize workloads with **Azure Well-Architected**

Apply best practices to rapidly onboard

Review technical documentation on featured products
