# Horizon on Azure VMware Solution (AVS)

More than 90% of businesses already use the cloud for some of their workloads, yet 70% of applications are still housed in corporate data centers and on-premises, private clouds. This is because of three primary reasons.

- Determining which cloud solution is best from a cost, maintenance, and management perspective can be overwhelming.
- Disparate feature set, tools, and expertise are key reasons for delaying transition to the cloud.
- The perception of a costly, painful migration process and business disruption often postpones cloud adoption.

## “Horizon on Azure VMware Solution”: The Go-to Cloud Solution for all organizations having an on-premises VDI footprint.

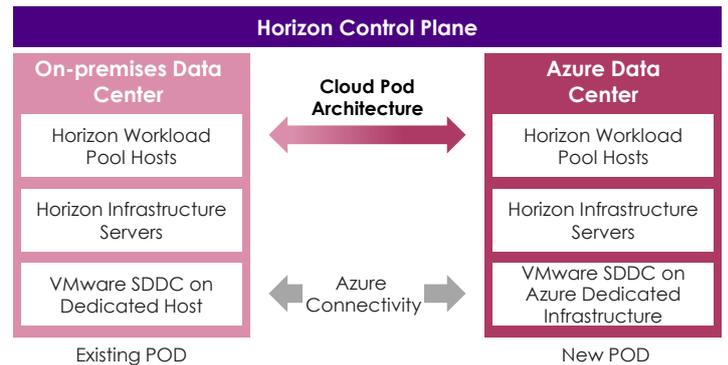

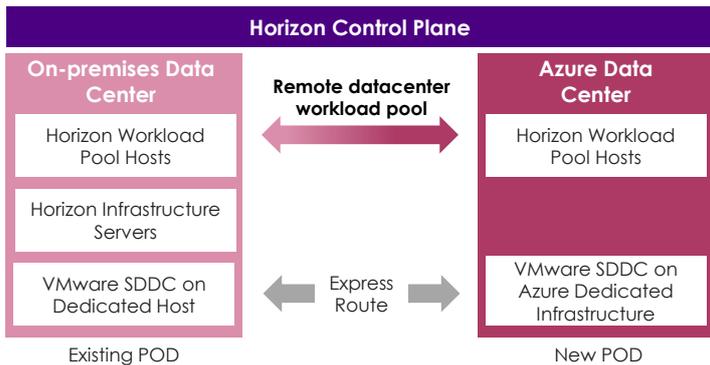

**Azure VMware Solution** is a comprehensive solution that combines the best capabilities of both the VMware Software-Defined Data Center (SDDC) and Microsoft Azure to seamlessly migrate any VMware workloads to the cloud – including VMware Horizon desktop and application virtualization workloads. Since Azure VMware Solution is based on an architecture and administrative interface that closely mirrors the VMware Horizon on-premises solution, ensuring that the learning curve for administrators is minimized, moving an on-premises Horizon VDI environment to Azure VMware Solution seems like an easy-button click.

With the combination of Azure VMware Solution and VMware Horizon, businesses can easily expand or migrate their desktop and application virtualization workloads to dedicated Azure infrastructure while continuing to leverage their existing VMware Horizon investments, skills, and processes. This ensures global operational consistency with a hybrid architecture that optimizes your cloud footprint based on your bursting, disaster recovery, and business continuity needs.

### Two architectural options for Azure VMware Solution:

**Burst** is used when you need to spin up workloads quickly by adding Azure-based capacity to on-premises Horizon environments. Best for small scale or short-term environments.

**Extend** creates an additional Horizon environment in Azure VMware solution that has the ability to scale while connecting to your existing on-premises environment via the Horizon Control Plane.

## Use Cases

**Horizon on Azure VMware Solution is ideal for organizations whose objectives are:**

### Disaster Recovery

Rather than duplicate costs for an idle standby data center, Horizon on Azure VMware Solution can serve as an on-demand disaster recovery site for on-premises VDI data center infrastructure.

### Easy Expansion

Instead of physical expansion, the existing on-premises VDI cloud pod architecture running at maximum capacity can easily be appended with VDI cloud resources.

### Save Time on Approvals

As burst mode is an extension of your existing VDI user workloads, it results in significant time saving on internal security approvals.

### Cost Savings and Time to Deploy

The Azure “pay as you go” model reduces TCO and ensures that compute resources are billed only on an as-needed basis. Compute resources are immediately available, avoiding the time and cost associated with purchasing and deploying physical hardware.

## Why Anunta

Our strong experience in delivering multiple projects on Horizon OnPrem, Horizon Cloud, VMware SDDC, AVD and Azure VMware Solution makes the entire transition seamless like a **“Click of a Button”**.

Anunta owns the end-to-end process, including design, implementation, delivering a pilot, moving it to production, testing, migrating users, and ongoing management of the infrastructure.

A specialized provider with focused EUC product portfolio, and **10+** years of extensive hands-on experience designing, transitioning, deploying, and managing virtual desktops for small, medium, and large enterprises globally.

Anunta is a Master Competency Partner in Digital Workspace and has Microsoft AVD Advanced Specialization.

We not only understand the technology but also the funding programs from both OEMs to offer free pilots to customers who qualify.

**24X7** Service Desk support

Anunta is a Partner Credit Transfer (PCT) Certified Partner of VMware. VMware customers can use PSO credits to purchase Horizon on Azure VMware Solution adoption services.

## About Anunta

Anunta is an industry recognized global Managed Desktop as a Service (DaaS) provider focused on Enterprise DaaS, Packaged DaaS and Digital Workspace technology. We have successfully migrated **500,000** remote desktop users to the cloud for enhanced workforce productivity and superior end user experience. With over **10** years of specialized experience in desktop virtualization and over **400+** experts, Anunta's virtual desktop solutions provide improved employee productivity and superior end user experience.
