

Managed Protection

Business Continuity-as-a-Service

The Coretek Managed Protection business continuity solution uses Azure cloud-native or third-party tools, offering clients the option for solutions that best fit their business needs.

This solution uses Azure and private cloud technologies to offer a flexible option for all business requirements as it fits a hybrid cloud model

Leveraging Azure Site Recovery Manager for replication of Azure virtual machines and on-prem virtual machines provides a hybrid cloud solution that also uses Azure blob storage for long-term archival options.

Coretek will provide architecture design, business continuity consulting and planning to meet a client's compliance, security, audit, and business requirements. And upon solution deployment completion, Coretek will provide a successful recovery test with documentation for the client to include in their business continuity plan. Coretek will then manage the entire stack of technologies and provide annual successful recovery testing.

Benefits of Managed Protection
