

# 3D-Twin

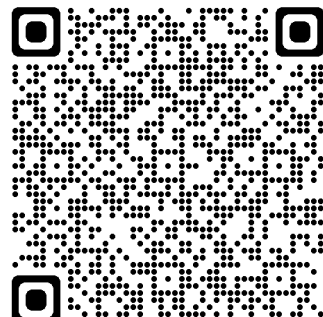

## Description

Visualize and interact with real world scanned data. Seikey provides professional enterprise service to capture reality through the use of laser scanners and drones. Data is then processed into AR-Ready models and made available in the app. User can interact with the 3D content by, scaling it, moving it, visualizing different scan times of the same place, cutting mesh with a plane, seeing tags and tooltips as well as spatialized media content like text, images and much more.
