A smarter way to manage your hybrid cloud architecture

## Leveraging Azure Arc to help you manage your hybrid and multi-cloud architecture

At PwC, we understand the importance of hybrid and multi-cloud architectures

Cloud-based architectures can provide many benefits such as scalability, elasticity and access to the latest technologies.

However, for many businesses moving their entire IT infrastructure to the cloud isn't right for them. In many industries such as healthcare and financial services, data must remain in-country or on government servers. Others are simply reluctant to surrender existing hardware or become dependent on one vendor. Whatever the reason, PwC can help you manage your hybrid and multi-cloud architecture using Azure Arc. Azure Arc is a cutting-edge solution that allows you to maintain a hybrid and multi-cloud architecture while still making the most of Azure services. With Azure Arc, you can manage all your servers in one place and even run advanced technologies like Azure Machine Learning on your own private servers.

Why PwC?

PwC combines business-led consulting services with Microsoft Azure, the world's fastest growing cloud platform, to deliver agile, tailored and transformative offerings. In partnership with Azure, our offerings unlock holistic, end-to-end transformation for your organization.

Our partnership with Microsoft
