Application Modernization Assessment

Embracing the cloud is still CIO's top priority to achieve their cost, scalability, and AI-powered innovation agenda. However, doing so is complex and time consuming. It requires not only the right technology decision making but also aligning people and processes that use these applications.

You need a partner who can collaborate with both business and technology stakeholders and who also has the experience of designing target architectures and leveraging industry best practices and well-architected frameworks.

Build your winning modernization strategy with Netrix

Netrix is a leading Microsoft Partner with a specialization in Application Modernization and with decades of experience modernizing the most complex applications. In this assessment, our team will assess your legacy application portfolio and design a custom modernization roadmap, aligning each application with one of 6 "R's" of modernization.

Our delivery process

Gain as-is understanding of application portfolio
Workbook to catalogue the legacy application portfolio.

Review business and technical goals
Review cloud modernization strategy, timelines, and business justification with business and technology leadership.

Analyze current infrastructure
Review the application portfolio, identify representative applications for deep dive, and perform the necessary deep dives of up to **five (5)** applications through multiple meetings and workshops.

6 R's of modernization

Rehost	Low to minimal code changes for shift to cloud
Replatform	
Refactor	Cloud-based application
Rearchitect	
Rewrite	Cloud-based intelligent application
Replace	

Our final deliverables

📅 **Duration: 3 Weeks**   💲 **Cost: $55,000**

01
Application portfolio summary and "6 R's" alignment

02
Cloud adoption plan for high-priority migrations

03
GitOps maturity assessment

04
High-level architecture design for up to **five (5)** applications

05
Migration plan, along with timeline, migration cost, and Azure cost estimates

Netrix Global can take your Microsoft-powered infrastructure to the next level

From cloud through security, we provide industry-leading engineering and services expertise to help you customize, automate, and analyze your entire environment.
