

# intelligeni

Full Stack Observability & AiOps

Detect Incidents early

Resolve incidents fast

Full Stack Deep Monitoring & Observability

Computes impact on system health; learns detects and predicts behavioral patterns

Creates meaningful scenarios – 10x noise reduction

“What has changed” – causation and correlation

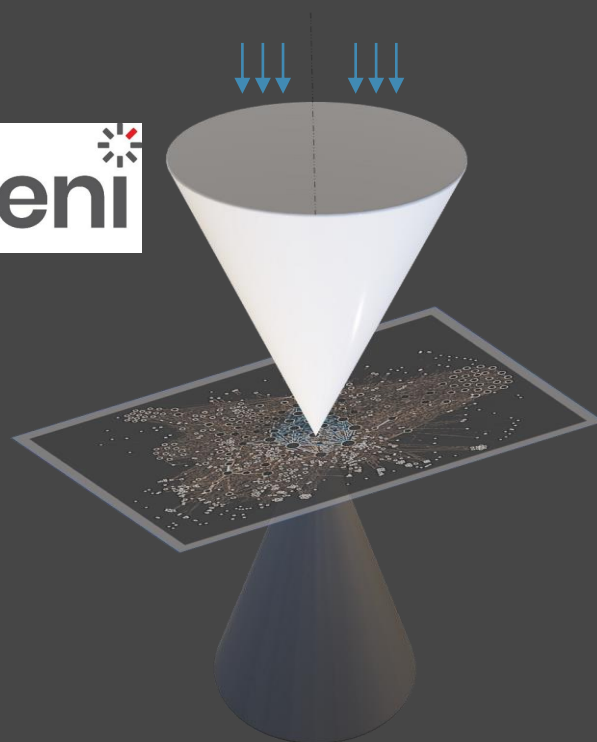

Collaborative ChatOps: Single Interface to resolve ANY Scenario

Drives Intelligent automated resolution

intelligeni

The Intelligeni Knowledge Graph

- SaaS based **Core** and operator console
- Secure on-prem/in customer cloud **Edges** to gather data and execute secure actions
- Anomaly detection across metrics, logs, traces and events
- Complex event correlation models
- Unique computational model of QoS
- Learns behavioral patterns and relations
- Predicts anomalous behaviors
- Knowledge graph driven intelligent automation
- ML based root cause detection model
- Observability heat-map identifies monitoring dark-spots
- Detects configuration, topology, usage and behavioral changes
- Native integration with Azure App Insights
- Bi-directional integration with ServiceNow and other ITSM tools
- Triggers remedial action execution using  $\mu$ -Bots, Ansible or StackStorm
- Optional Intelligeni agents with OSQuery for enhanced diagnostics

Not run of the mill AiOps

Intelligeni architecture has two key components which runs on Azure

- - Intelligeni Core: SaaS is deployed on a public cloud. It can be deployed in a specific region (North America/ APAC/ Europe etc.) depending on customer requirement
- - Intelligeni Edge (One or more): On-prem/ cloud is deployed within the customer environment (in cloud or on-premise depending on the customer environment). The Edge connects to Core via a secured VPN tunnel.

Runs on Azure | Available in 3 powerful offerings

## Simple Subscription

Subscribe, setup your edge, run it yourself

We will help integrate and train your teams

Per monitored end-point pricing

## Observability as a Service

Point us to your app-stack, we setup and run Intelligeni for you

We guarantee a reduction in incident response and diagnosis times

We own diagnosis, you resolve

Per app stack pricing

## Application Reliability Assurance

We run your apps for you to SRE principles

We bring APM, DevSecOps and full lifecycle management

We Guarantee your App SLOs

Per app stack pricing

## Next steps

- Do a 3-month POC
- Identify 2 critical apps
- Agree on POC objectives and SLAs to be proved
