Azure VMware Solution 4-6 Weeks' Assessment

Ver 1.0

Get ready to move your on-premise environment to Azure VMware private cloud with TCS' 4-6 weeks' assessment

During our assessment, we'll help you plan your cloud adoption which is an input to implement and migrate the workload. Organizations are adopting AVS to modernize their applications, enhance the on-remise infrastructure or to use the AVS as DR solution. Based on these requirements, we'll conduct a careful assessment of your environment.

With years' experience handling applications, we can help you manage your application performance in various environments. And that brings special factors to perform a prompt assessment for Azure VMware Solution private cloud. Our standardized approach and uses a variety of accelerators (in-house/third-party) to handle various kind of assessments to help organizations conduct their assessment phase. During assessment, we discuss the key drivers required to adopt Cloud and our approach and capability to enable the AVS private cloud.

We will conduct a workshop during which we collect the information via automation and process it to provide you with visibility on target sizing and the cost factor to build AVS for workload migration. To understand the application architecture, we will collect the application information from your stakeholders. This information is then utilized to generate an assessment report and decide the migration path and move group that's right for you.

During the assessment we collect additional workload information to help us identify the right migration path with the help of your organization's stakeholders. We then process this information which is to be used for design and deploy the Azure VMware Solution.

As an output of assessment, we assess the application and create a move group, create assessment report which provides the suitability of the workload to the AVS. We do the analysis on compute to provide the correct sizing and approximate cost to deploy AVS infrastructure.

Below are the expected outcomes of 4 to 6 weeks' assessment of on-premises workload.

- Analyze the application and create Move Group to migrate workload
- As-is inventory
- AVS Sizing and cost to deploy AVS infrastructure
- Performance of Apps & Compute

TCS Advantages:

- Factory based approach – Our proven factory standard approach across many organizations to perform assessment, Define, Design, Deploy and manage services
- Strategic alliance – TCS is a Microsoft Gold Partner and Azure Expert Managed Service Provider
- We are the first Microsoft partner to complete the Microsoft Azure VMware Solution advanced specialization certification, recognizing the TCS proven expertise to deliver the highest quality.
