

# [WORKSHOP] CLOUD NETWORKING

## PERFORMANCE, SECURITY AND OPTIMIZED NETWORK SCALING

So, we've all already dipped our toes into public cloud offerings. Next, we submerged our "low hanging fruit" into public cloud services as events, budgets and life cycles demanded. As we begin to transfer more of our enterprise into Public cloud services, the fluidity of the enterprise demands that our application performance, security and interconnection are optimally scaled for dynamic use. This workshop seeks to validate the optimum end user experience of your public cloud consumed services.

We will explore and deliver a snapshot of business costs and goals, application performance, security and interconnection with your enterprise to existing public cloud services. Our goal is to deliver a high-level point of view on how to best optimize the experience and cost of your public cloud consumed services whilst utilizing existing and new resources.

### WORKSHOP PROCESS

- Discussion and review of existing Public Cloud Services Architecture
- Discussion and review of existing Public Cloud Services Security posture
- Discussion and review of existing Public Cloud Services interconnection with the enterprise
- Discussion and review of existing experiences for Public Cloud Services as delivered to the end user

### OUTCOMES

- Overview scoring card in each of the above areas (1-5)
- Educational clarity on public/hybrid cloud application security and network optimization.
- Overview of public/hybrid cloud security and network design performance enhancements based on workshop

### PREFERRED ATTENDEES

- IT Management
- IT Cloud Infrastructure Team

### TIME FRAME

- .5 - 1 Day

### CONTACT US

Understanding our clients unique business goals is the first step in outlining the right path to the cloud. With ConvergeOne's team of cloud experts, we'll use our best practices to ensure our clients have a vision and strategy to execute their cloud journey.

- Enjoy a complete cloud collaboration solution, with purpose-built processes, workflows, and applications.
- Bring together innovative capabilities with a cost effective, per use, per agent model.
- Gain efficiencies and cost improvements by virtualizing your cloud solution in the way that works best for your environment.
