KORUS CONSULTING:
POWER PLATFORM WORKSHOP

What is Microsoft Power Platform and how you can use it to drive digital transformation of your business through Business Intelligence, process automations, low-code applications for employees and intelligent chatbots

Intro

Recent business trends make companies use new approaches in the ways they work and evolve. Microsoft Power Platform is a stack of modern technologies that allow businesses to change easier, faster, more effective and unlock value of citizen development

Agenda

- Power Automate – best tool to collect, prepare and transmit data across your organization in several clicks all due to 300+ pre-built connectors. Use configured APIs to launch actions such as messages and notifications, data transfer, approvals and much more. Automate your routine to unlock full potential of your employees
- Power Apps – create low-code applications for all kinds of business activities. From inventory management to onboarding of new employees. Interact with various data sources and simplify user journey to maximize satisfaction
- Power Virtual Agents – unleash full potential of intelligent chatbots with no need to educate AI or hardcode them. Ready to use integration with hundreds of services will allow your business to provide unprecedented experience
- Power BI – collect and analyze data from all points of business processes to gain powerful insights and provide data-driven decision making across your organization.

Deliverables

- ✓ Best practices demonstration for each tool
- ✓ Collaborative workshop to identify your business cases
- ✓ Professional advice on licensing management
- ✓ System Configuration as per the agreed solution design
- ✓ End user Training
