

WHY MIGRATE VMWARE WORKLOADS TO AZURE?

It's simple really.

Organisations who make the move to AVS can experience:

01. On-demand scalability,
02. Automation of services,
03. Fast provisioning of VMware workloads.

They too can benefit from the **continued utilisation of existing VMware tools, skills, and investments** including vSphere, NSX, vSAN and HCX; whilst modernising applications through Azure's cloud-native services.
