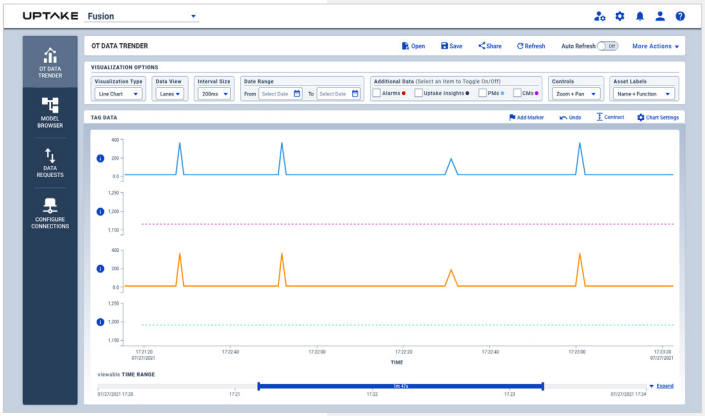
UPTAKE Fusion
UNIFIED DATA MANAGEMENT

UNIFY OT DATA AND TURN IT INTO INDUSTRIAL INTELLIGENCE

It's a challenge moving industrial operational technology (OT) data (time-series, historical, metadata) from your on-premise sites to the cloud. OT data is stored in systems such as DCSs, PLCs, SCADA, and Historians but hard to access and share in a secure fashion enterprise-wide for timely, smarter business decision-making. It's time to unify your OT data in the cloud.



UPTAKE FUSION FOR UNIFIED DATA MANAGEMENT

ACCELERATE INDUSTRIAL INTELLIGENCE FOR FASTER, BETTER INFORMED DECISION-MAKING

Uptake Fusion unifies OT data in the cloud; data that has long been held hostage by proprietary technology and the high cost of tag fees and licensing requirements. The application enables and accelerates the process of moving data from industrial sites, facilities and data centers to your Azure cloud. Setup and data migration are simple and secure. Just connect it to move and store data in the cloud where it can be organized, unified, and contextualized. You're in control of your data at all times.

Once your OT data is in the cloud, it's securely accessible to everyone given access. Better yet, put your data to work with tools like Time Series Insights and Power BI. OT data enriched with advanced analytics surfaces insights and intelligence that help entire organizations optimize costs, manage risks, and increase revenue assurance.

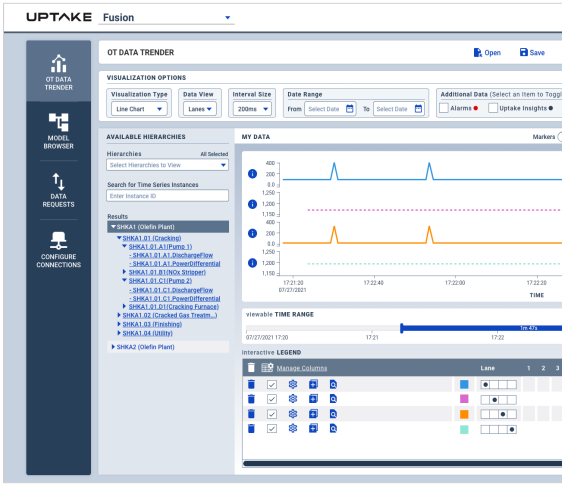
WITH UPTAKE FUSION, YOU CAN:

- Liberate OT data and make it accessible to the right people, anywhere, anytime
- Bypass excessive "per tag" and licensing fees for moving and accessing your own data
- Create curated data sets from time-series, transactional, design data
- Turn data into intelligence with insights and decision support
- Leverage Uptake Fusion's additional capabilities such as:
  - Uptake Connectors for data connectivity with open API/Data formats (i.e., OSIsoft PI, OSIsoft PI-AF, Ignition, Azure IoTHub, OPC, ODBC, MQTT, MIOTY, and REST)
  - Uptake Elevate to securely move, store, and access data regardless of technology
  - Uptake Lenses automatically organizes, unifies, and correlates data into different sets for multiple stakeholders



ACCOMPLISH BUSINESS GOALS WITH FUSION

Now that you know what Fusion does and how it works, you're ready to accomplish business goals for the company. Fusion moves data and empowers to monitor and diagnose asset performance, analyze operations performance, even meet production and regulatory reporting requirements. Given its strengths and applications, Fusion is ideal for a number of asset-intensive industries, including oil and and gas, power and utilities, mining, and manufacturing.

OT DATA UNIFICATION STARTS TODAY

Traditional IT has shined brightest in its use of the cloud. Now it's OT's turn. With Uptake Fusion, asset-intensive companies can easily, securely, and cost-effectively move, store, and access their OT data in an open cloud environment. By utilizing readily available analytical tools, you can translate your data into smarter operations.
