

# .NET App Modernisation – Code Review

Application Modernisation unlocks more advanced cloud capabilities such as increased business agility, global scale and improved resiliency of applications and services. Often when applications are moved to the cloud the costs can be higher than expected, there's downtime during migration and companies aren't leveraging the power of the cloud. Companies end up with the same application hosted at a more expensive price. XAM will assess your application for opportunities for modernisation.

## CODE REVIEW

Duration: 2 Weeks  
Cost: \$19,250

Code Review will assess your codebase for health and provide a report on required remediations before modernisation. These include code health, deprecated libraries, architecture, integration, scalability, maintainability and performance.

Outputs: Code review document with remediation recommendations (MoSCoW)

## WHY MOERNISE

### Accelerated innovation

Devote less time and resources to maintaining apps and infrastructure, and spend more time innovating.

### Improve time to market

Improve time to market by using fully managed application and data services.

### Improve Resiliency & Security

Keep workloads more secure with Azure security services.

### Avoid Legacy Issues

Avoid legacy applications that cannot be maintained, deployed easily, is referencing unsupported and insecure libraries.

## WHY XAM ?

XAM are award-winning designers, developers and consultants. We focus purely on Microsoft application technologies. We're known for our technical excellence, delivery mastery and digital design experts. We help customers design, build and integrate better software leveraging Azure, .NET, React and more.

*"XAM have been the best 3rd party consulting engagement I've ever been involved in."*

– Chad Campling, Software Engineering Manager, Opteon
