## 01° DESIGN & DEFINE - BUILDING THE FOUNDATIONS

Our process involving reviews, interviews, and workshops helps you to learn and creates the best roadmap tailored to your cloud journey.

## 02° DEVELOPMENT AND IMPLEMENTATION

Enable cloud-based solutions so you can decrease time-to-market, increase provisioning agility, optimize continuous automation, resources and cost.

## 03° MAINTENANCE AND CONTINUOUS DEVELOPMENT

We can help you to manage and protect your workloads and services in Azure across identity, data, networking, and security with our scalable and modular services.

Data required for operations and decision making may be fractured and stored in disparate systems, creating a situation where decisions based on data and facts are hard to make.

Our Design & Define process brings you the answers to all questions on how to gain the benefits of public cloud and an actionable plan.

# Design & Define Data Assessment

To gain the necessary knowledge to take advantage to data for your business, we create the best plan suited just for your organization

There is more data available than ever, but its usability is not always well understood. Whether you want to lead your work, development, or operations management we can help you select that data and utilize it to bring added benefits to your business.

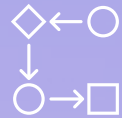

With our environment analysis, stakeholder interviews, and facilitated workshops we create a roadmap to deliver the optimal benefits suited for your business needs.

# Azure Data Platform

We help you build to your data platform to match your business and analytics needs.

Data & AI  
Azure

Organizations have a lot of data, but can it be utilized for business needs and bring it visible for effective decision making? What can the correct usage of data enable for a business?

To solve this problem, we can help you create the appropriate platform for you by identifying the correct data sources, creating orchestration or even migrating large data sets, creating data processing and help serve it to be used by for example applications, reports, or APIs.
