

# CAMEYO

## Windows Apps to Any Device, From the Browser.

Digital transformation requires application transformation

As you shift to the cloud as part of your digital transformation, what happens to your legacy Windows applications?

Your users still need access to them to be productive, but using expensive and complex Virtual Desktop Infrastructure (VDI) or Desktop as a Service (DaaS) products is overkill for the delivery of Windows applications to any device.

Cameyo's virtual application delivery platform enables your people to quickly and easily access the Windows and internal web applications they need, securely from the browser, without the need for VPNs. They get the full desktop version of their applications, without the apps needing to be installed and managed on their devices.

"Digital Transformation progress is constantly held back by the lack of full-functionality applications when making the cloud shift. CXOs often issue 'cloud first' mandates that result in unintended consequences for their users' application experience, either leaving their teams with a substantial functionality deficit or committing the organization to a massive OPEX/CAPEX path with VDI. Cameyo uniquely enables the CXO to complete their Digital Transformation journey and gives both IT and line of business a fully functional customer experience."

Mark Bowker, Senior Analyst,  
Enterprise Strategy Group

### Cloud Native

A built-for-the-cloud service that runs in any environment - cloud, hybrid cloud, or on-premises.

### Cost-Effective

Multi-tenant platform leverages cloud savings with a per-user subscription to prevent bill shock.

### Simple

Setup takes minutes with little to no IT experience necessary and support is always free.

### Secure

Built-in security features include HTTPS, single sign-on, separation of apps from the OS, and more.

"Unlike Nutanix Xi Frame and Citrix XenApp, there is no complicated infrastructure to deploy and manage. Not only were we up and running with Cameyo in less than three hours, but we can also deploy new apps almost instantly. We never have to re-image or deal with a Golden Image. Cameyo could not be easier."

- Emir Saffar, CIO at Ur&Penn

# Enabling Greater Workforce Flexibility with Cameyo

## Increase Productivity

- Access to business-critical apps from the browser
- Seamless user experience
- Works even on poor home and cellular networks

## Reduce Cost & Complexity

- Eliminate the need for costly infrastructure without VPNs
- Reduce management costs and simplify user experience
- 10x cost savings compared to VDI and DaaS

## Superior Security

- Non-persistent servers
- Corporate network separated from end user device
- Apps delivered from behind the firewall and over HTTPS

## The Cameyo Virtual Application Delivery Platform

Cameyo is the most cost-effective and secure way to deliver Windows applications to any device from the browser.

### An offer to get you started:

- Free no-obligation trial
- Cloud usage costs included
- Free support
- Bulk discounts available
- Get started now by contacting your Azure account representative

## Enabling 500 Remote Workers in 3 Hours

As the COVID-19 pandemic escalated, a large energy company in the UK quickly implemented a mandatory work-from-home policy. They determined that 500 employees throughout the enterprise would no longer have access to their billing and client management software, which was critical for keeping their business moving forward. In just 3 hours Cameyo was able to deploy the service and restore application access for all 500 users at the energy company, and delivered the platform as a fully elastic service in the customer's cloud environment to ensure user spikes do not impact performance.

## The Benefits of Using Cameyo for Virtual Application Delivery

- **For remote work** - Cameyo helps you provide your users with seamless access to all of the apps they need to be productive no matter what device they are on.
- **For managed service providers (MSPs)** - With Cameyo, providing your people with virtual access to Windows apps no longer requires Virtual Desktop Infrastructure (VDI) and Desktop as a Service (DaaS).
- **For independent software vendors (ISVs)** - Deliver the full desktop version of your software as a service, save millions on redevelopment costs and provide immediate trials from your website.

## Why Cameyo?

By giving organizations of all sizes secure access to business-critical Windows and internal web applications from anywhere, Cameyo is delivering the simplest, most cost-effective way to securely enable remote work and cloud migration strategies. With no infrastructure required, customers can fully deploy Cameyo in hours, not weeks or months like VDI and DaaS.
