

## Microsoft Security Cyber Range Deployment: 1 Week Implementation

### Includes:

- Microsoft 365 E5 Security deployment
- Azure Sentinel Integration
- Cloud backup and security software
- Proactive Co-Managed IT security management
- Included Cyber Range training (required for CMMC ML2 and above)

PROJECT ARES®

## Microsoft Security Cyber Range Deployment: 8 Week Implementation

KAMIND Security infrastructure utilizing **Into The Breach Project Ares Cyber Range training**. Assisting SecOp Teams of all levels address rapidly changing threats, tactics, and tools.

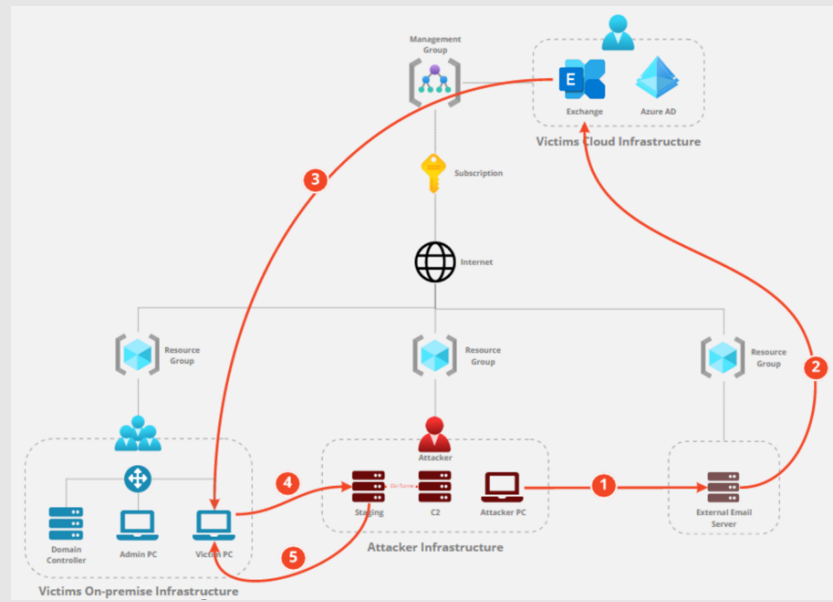

These are our **Managed security programs** and training your teams with our **Project Ares Cyber Range tools\***. With KAMIND's approach to **Cyber deployment** and training, your SecOps team is set up for success.

Today's aggressive attacks require not only an update to the security solution in your environment but also training for the security teams so they can adequately defend against threats **utilizing:**

- \*The Addition of **Project Ares Cyber Range Training**. Project Ares is designed to appeal to the learning style of the next generation. Users can quickly and easily add new missions to address rapidly changing threats, tactics, and tools.

A security program is a process and not a product. Therefore, we go through a multi-phase approach to train and help your team to get to the next level all designed around the Microsoft 365 E5 suite. We build out the **Microsoft Defender for Office 365** and **Microsoft Defender for Azure** and deploy **Azure Sentinel** allowing your team to work together to protect your environment.

## Phase 1

**Security workshop to explain the Microsoft Security subscriptions to your team.** Our workshop is a single day activity where we walk your security team through configured Microsoft environments, and we analyze your current environment to discover the areas that may not be configured according to the best-known methods. Once we complete the workshop, we build an assessment document that is used by the security implementation team to deploy the security environment for your company.

## Phase 2

**Train your team in our Microsoft 365 E5 Cyber Range.** Now that we have completed the security build out for you, the next step is to train your team in our Cyber Range following the Microsoft Kill chain on how to best understand the threats and how to combat them. We train your team in 4 different areas. This prepares your teams with hands-on experiences to successfully thwart any real attacks.

# Client Case Studies/Solution Success Stories

## VIBRANT TABLE GROUP

Working with KAMIND IT, a Microsoft Partner Network member, the VT Group has equipped employees with a flexible suite of **communications tools** that lets them stay in touch from anywhere, anytime, from any device. Planners, kitchen staff, event managers, and servers use cloud-based email, instant messaging, and document-sharing to create great ideas, execute them to a tee, and solve glitches immediately. With the **Microsoft Office 365** “pay as you use” pricing model, VT Group shrinks and expands its licenses to match its seasonal business, saving money that it can redirect to expanding its business and amazing customers.

## MCGEE WEALTH MANAGEMENT

KAMIND acted as an extension of the PBS Engineering and Environmental IT team to address this gap/need. KAMIND brought their knowledge of **Microsoft Office 365, VOIP** for Teams to assist and improve Microsoft Teams Voice/Calling deployment and support. The configuration deployed was to have an operator’s console in place that will manage the **Teams VOIP infrastructure** and assist on call routing to different users’ extensions. The Teams configuration was to be built on a set of call queues that the call is forwarded to after reaching the auto attendant or the operator's console.

## HEMATOLOGY ONCOLOGY ASSOCIATES

KAMIND IT proposed Hematology Oncology Associates PC to the **KAMIND KAM-Fort Security services**. This will build an intelligent security landscape and a strategy that addresses the foundational principles of modern workplace security. KAMIND's proposal covers the basic onboarding of the client to the **KAM-Fort Security Plan**. This creates a **Microsoft Office 365 Azure Cloud Solution** and integrates devices (Laptops/desktops) into the **Office 365/Azure Security environment**.
