

A mini ASRS module, designed from the ground up for grocery retail.

Off-the-shelf solution

It fits in a standard shipping container, assembled in our facilities and shipped globally.

System overview

Storage overview

Tote specs: 650mm x 325mm x 255mm - 35L capacity.

Totes can be divided into up to 6 cells using dividers.

A single rack holds 12 totes.

- Dual-tote kiosk with an advanced UI and a sensor array for error-free picking

- Extremely Fast 400-450 totes-to-front per hour
- Full temperature control (ambient/chilled/frozen)
- Al-powered Inventory management
- Dual-tote kiosk with an advanced UI and a sensor array for error-free picking
- Transported to any location in a standard shipping container

Can be done by anyone with minimal training. Loaded in minutes.

Inserting full rack into machine through built-in loading bay.

Requires only ~2 minute pause in order fulfillment process.

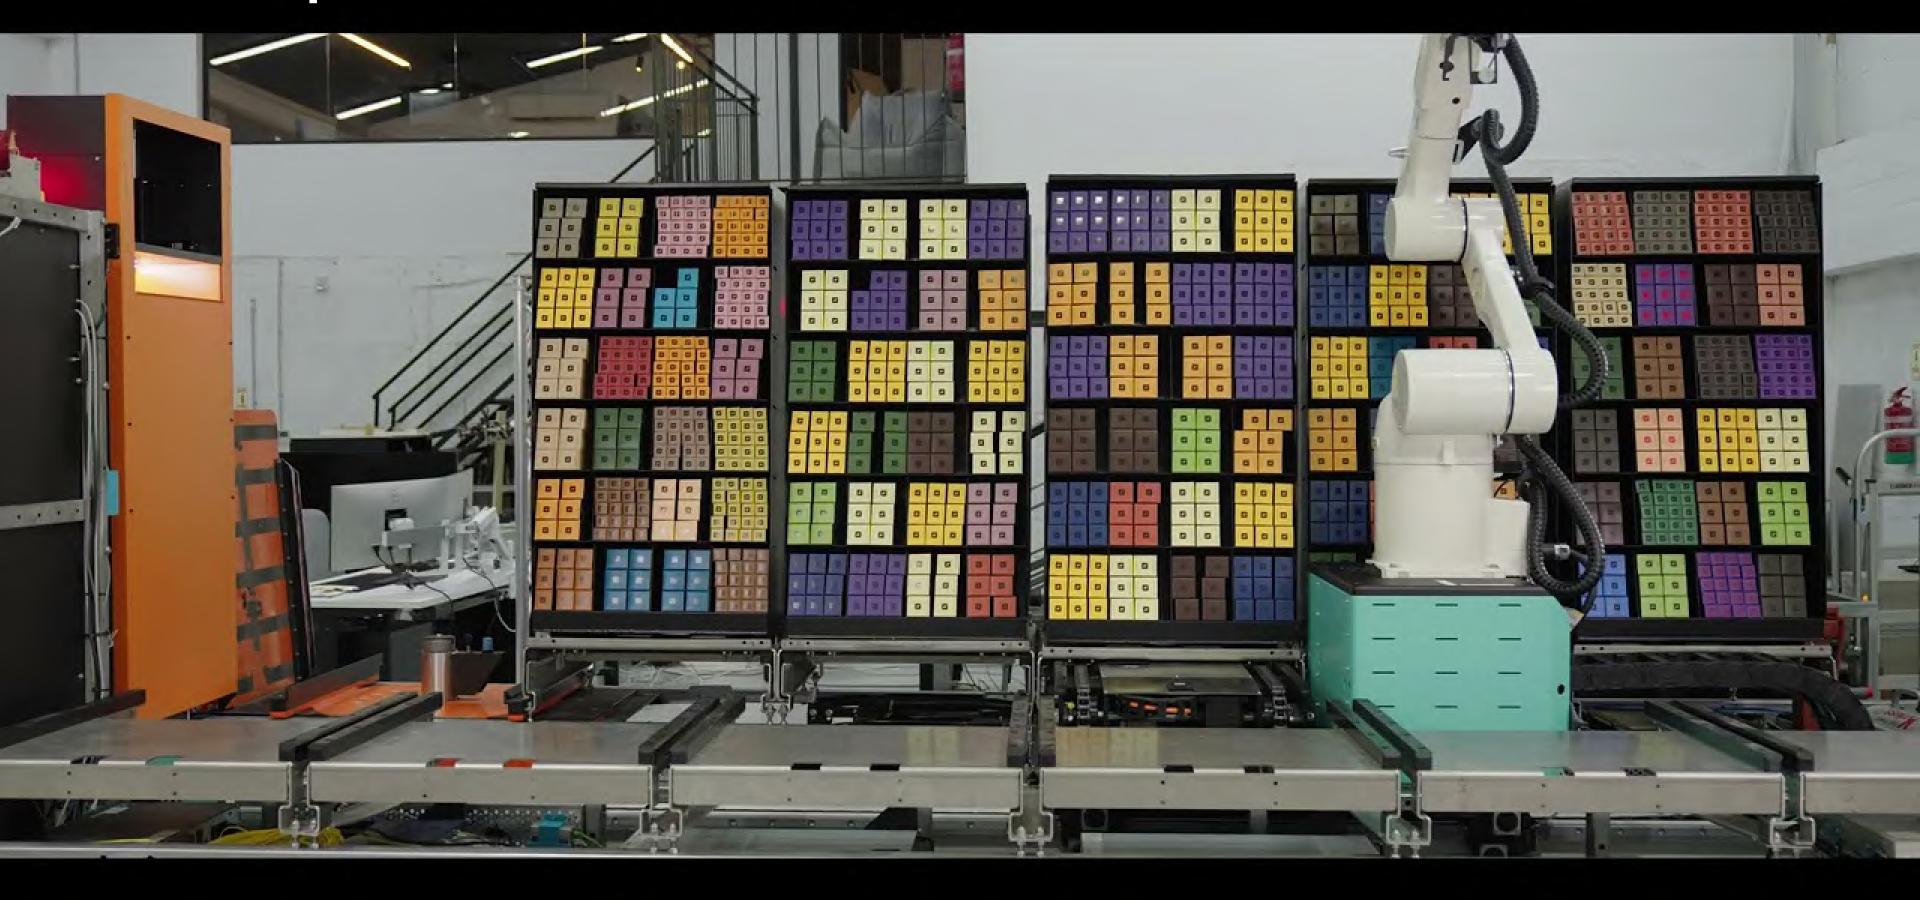

Efficiently replenish specific SKUs on-the-go by inserting loaded totes through side-mounted feeder, without interrupting order fulfillment process.

The system signals if a certain SKU needs replenishment, brings the tote to the picker via the kiosk, and directs him on which items to replenish.

Next-gen automation for future-facing retail

Fully autonomous fulfillment solution for omnichannel, based on the 1MRobotics ASRS, upgraded with state-of-theart Al-powered automation.

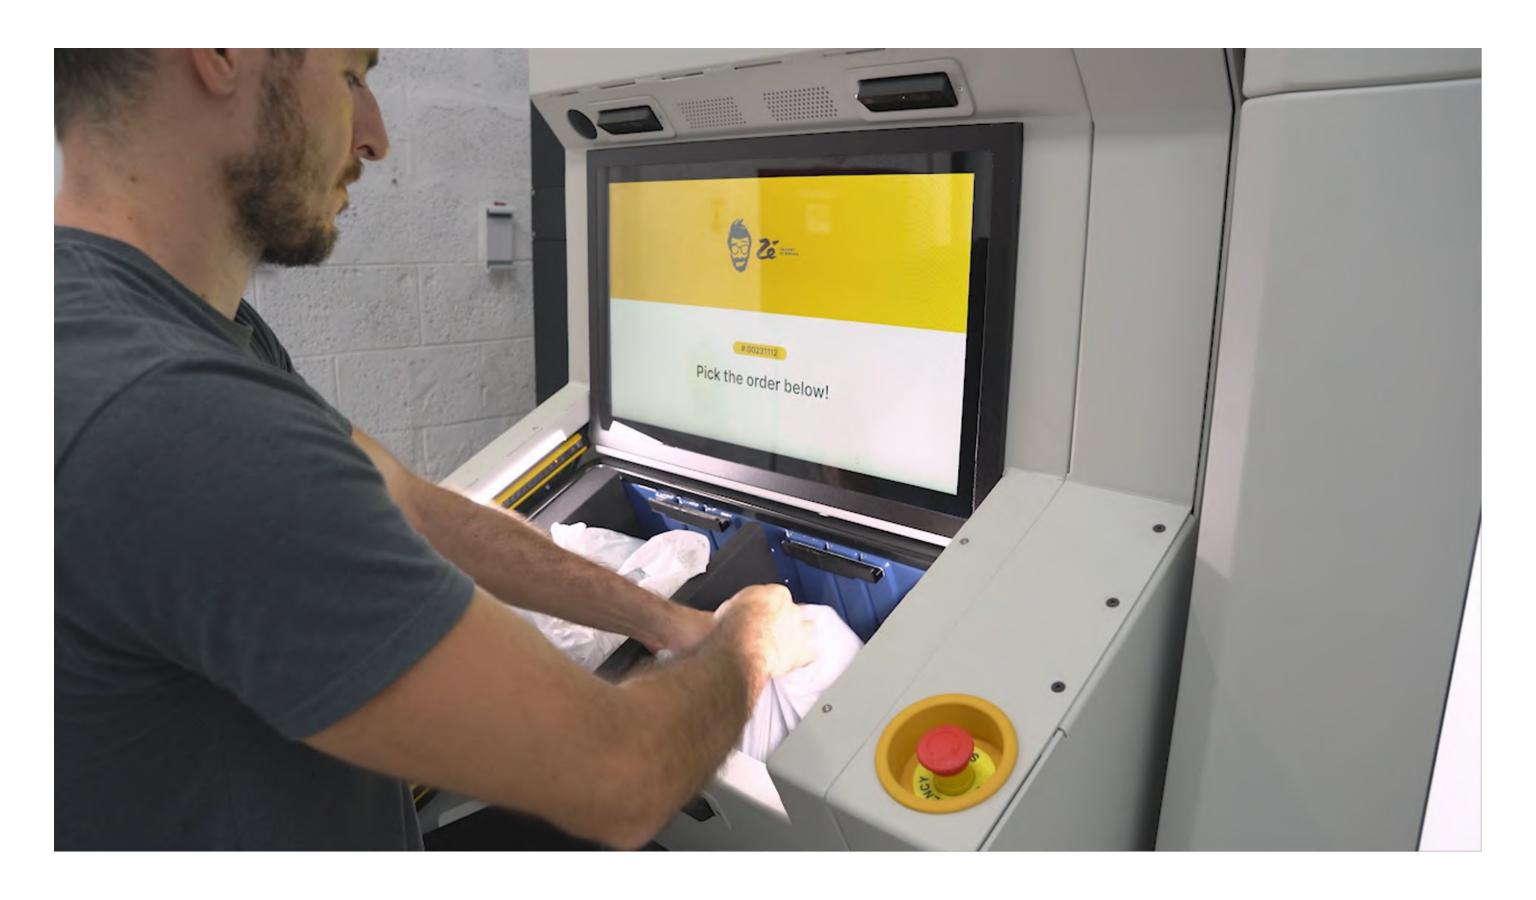

Our system performs picking and packing, so that the customer collects a packed, good-to-go order.

How it works behind the scenes

- 1. The robot places a tote with open bags from the bag dispenser in the system.
- 2. The robot brings a tote with the requested products to the packing station.
- 3. The system recognizes and picks the required item.
- 4. A tote with ready bags goes to the kiosk.

User experience
