

Simplifying Windows Virtual Desktop Printing

Solution Brief

PrinterLogic enables IT professionals to eliminate print servers and leverage existing print infrastructure to manage printing in Windows Virtual Desktop (WVD) for end users wherever they log in. With our centrally managed direct IP printing platform, you'll empower end users with all the features of enterprise print management using a secure, highly available, serverless printing infrastructure.

Simplify VDI Printing

Deploy printers based on user ID, device location, name, group and/or organizational unit (OU).

Eliminate Print Servers

Eliminate infrastructure costs, print-related WAN traffic, single points of failure, and management overhead.

Centralize Management

Centrally manage printers, drivers and profiles without requiring a separate printing infrastructure for VDI users.

Eliminate Scripting & GPOs

Deploy printers and push out updates with no scripting, GPOs or admin rights. Printer objects and profiles follow end users wherever they log in.

Deliver Native Drivers

Avoid driver conflicts in VDI server farms. Deploy and manage both native and universal drivers for any network printer.

Accelerate VDI Deployment

Make VDI printing easy for end users and simple for IT to manage. Avoid printing challenges that slow down VDI deployments.

Solution Features

SaaS or Virtual Appliance

Advanced Reporting

Session Printing Auto-Deploy

Secure Release Printing

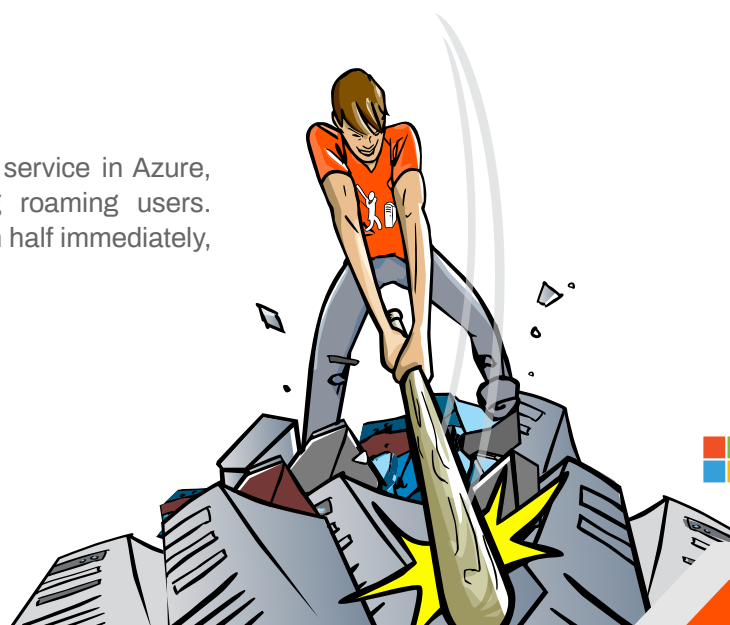

Self-Service Portal

Printer Redirection Support

We built out a remote desktop service in Azure, but had trouble accommodating roaming users. PrinterLogic cut our ticket load in half immediately, which was awesome.”
