

SharePoint Migrations

Migrating to Office 365 SharePoint Online can be a challenge, other tools are expensive, they don't handle errors and are slow. Movebot has you covered, no need to worry about filename limits or file upload sizes.

Migrating files into SharePoint

Not all cloud platforms support all of the character types, filename lengths or file sizes. SharePoint does not allow certain file characters such as < or >. SharePoint also has filename character limits of 400 characters (including the path) and a max single file upload limit of 100GB.

Keeping moving forward with Movebot

Movebot keeps your data moving forward and saves you time by automatically resolving SharePoint's filename issues and by getting a breakdown on issues that need to be looked at prior to moving a single file by using a preflight discovery scan.
