Enterprise data management challenges.

Complexity

- Elaborate architectures don't scale
- More teams are engaging with data

Uncertainty

- Tools and use case opportunities are constantly evolving
- Lack of clear guidance on where to start and how to drive the most value

Governance

- Security concerns stifle innovation
- Lack of consistent processes and policies creates data silos

Skills gaps

- On-prem expertise doesn't translate to cloud-based services
- Teams need upskilling to adapt to new ways of working

Slow time to value

- New solutions can take months to deploy and deliver ROI
- Inability to provide real-time, trusted data to inform timely decision making

Nordcloud

1

Data Foundation is a scalable, repeatable framework.

We show you where North is

We give you a strategic vision with frameworks to make that vision a reality

We help you implement a modern, scalable analytics ecosystem in Azure

You hit the ground running

We give you ready-to-use artefacts that are easy to customise

Benefit from reduced security effort because a robust foundation is there out of the box

Data governance is in place from the start

It's all geared to deliver business value

Domain data as a first-class concern

Data as product

Cross-functional domain data teams
